

Discover Hidden Skills & Expertise

TeamFolio is a knowledge discovery, enterprise skills hub that quickly enables organisations to benefit from knowing what they already know. The software is built on three design pillars:

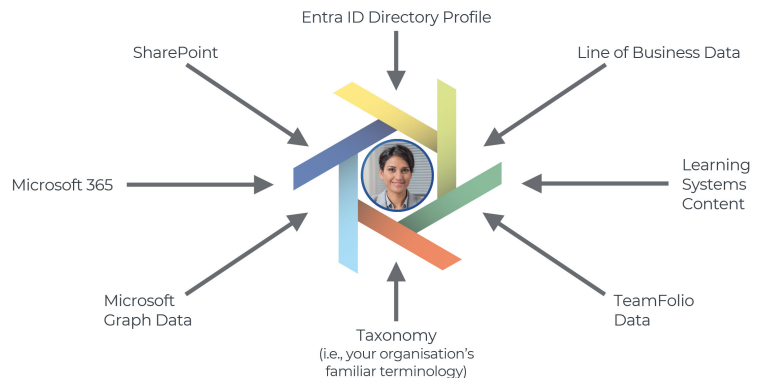

- Supporting employee agility**
 Provides the platform for your people's skills to be found, recognised and best utilised for the benefit of organisation and for the individual themselves improving staff retention.
- Improving customer satisfaction**
 Identify people with the skills, certifications or knowledge needed for quicker customer responses and project success.
- Enhancing operational efficiency**
 Provides a 'skills hub' that brings together existing silos of data in a single place with a simple, secure, familiar user experience making often hidden skills instantly visible across the organisation.

Rapid Skills Data Hub Deployment on Microsoft 365®

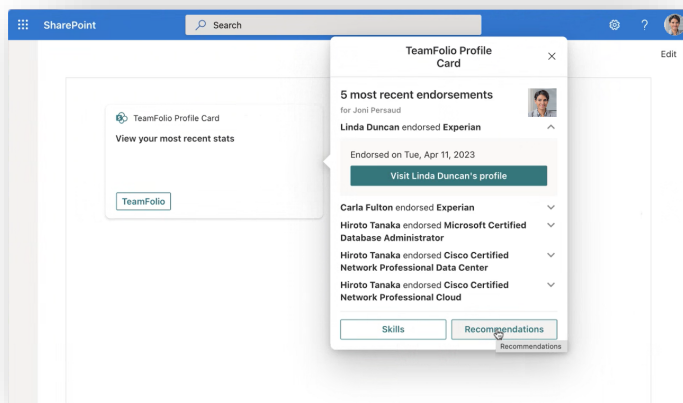

TeamFolio can be deployed very quickly and easily using an organisation's existing information technology and security systems. It can also act as a data source and a data integration hub for other operational systems.

The solution is approved by Microsoft and available for immediate trial via their AppSource market place store. This means organisations using Microsoft 365® can be up and running with a complementary TeamFolio SharePoint trial app installation in less than 10 minutes.

TeamFolio can also be deployed to Customers' dedicated cloud environments or as a hybrid on premises/cloud deployment.

TeamFolio at Your Fingertips in Teams & Viva Connections

As the Microsoft 365® offerings evolve, TeamFolio leverages this powerful platform providing the most comprehensive people profiles available, accessed via apps being used on a daily basis.

Access the power of TeamFolio via adaptive cards in Viva Connections or Microsoft Teams.

Enrich profile information and data to support Viva Topics. Use the Microsoft Power Platform to extend insights available from TeamFolio's comprehensive employee skills profiles.

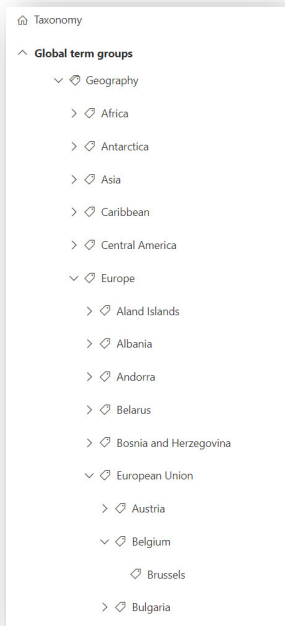

Tested to the Highest Standards

TeamFolio has been developed from the start with security, privacy and performance as key design principles. Any organisational GDPR requirements can be supported in TeamFolio along with any Customer specific governance regarding privacy consent policies.

TeamFolio has also been certified to the highest technical security standards available within the test labs of the Cyberspace Capabilities Center at the Pentagon, for use by the US Department of Defense.

Consistent Skill Classifications from Existing Data

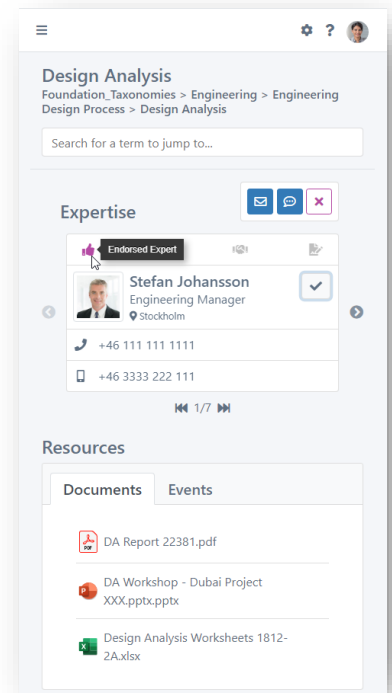

TeamFolio combines existing employee data with standardised terminology. This approach brings consistency to data from multiple sources while maintaining the master data and governance processes.

Making use of digital dictionaries enables people to much more quickly and easily share consistent, searchable skills profiles. Known as taxonomies, organisations can start with say, industry, taxonomies and then enhance these over time. Alternatively just use your own taxonomies if they already exist.

The use of a common, familiar organisational vocabulary provides many other advantages. If any other digital content like documents, emails or even calendar meetings, is also tagged with these terms,

When deployed in a Microsoft 365 environment, TeamFolio can bring people and content together in one place without any

additional configuration. TeamFolio's Nexus pages present this combined knowledge graph content in one place. Think of these as digital Communities of Practice or knowledge hubs.

"While searching for a solution for tracking specialized staff training records, we came across TeamFolio, or DiscoverMe as it was previously called. The application not only solved our initial requirements, it also provides great potential for enhancing collaboration between our research staff at large."

Marshall Reed, Manager of Information Systems, David Geffen School of Medicine, UCLA

About FidraSoft

FidraSoft are a highly experienced and dedicated team of data scientists and software engineers. Formed in 2017 by Fidra Consulting, the team have worked together for over 15 years, are focused entirely on developing the TeamFolio skills and expertise search platform and supporting our Customers and Partners.

We work with a growing network of partners in Europe, North America and Australia to support our customers in these regions. We are very proud of the fact that to date, every Customer has renewed all their licensed employees every year.

"We assessed TeamFolio carefully and searched for software with the same capabilities, but drew a blank. The only other option would have been to build it ourselves. Support from FidraSoft has been fantastic. The idea of going back to spreadsheets and emails sends a shiver down my spine. This is a far, far better way to manage skills."

Brent Van Lelyveld, Associate Director, BG&E Australia
