

Leaner operations and higher earnings start with taking care of critical equipment

Fiix is your partner on your digital transformation journey— we help teams reach operational excellence, make smarter CapEx decisions and lower OpEx, and decrease net working capital through organized, optimized, and connected maintenance.

Ensure asset performance

Get insight into equipment performance to prolong machine life and increase availability, optimize working capital with better inventory turnover, and track asset costs for accurate CapEx decisions. Fiix's management module helps teams easily capture an asset's maintenance history, inventory consumption, and financial history.

Increase productivity

Drive operational excellence, keep assets in optimal health, and save three to four times the operating costs by moving from reactive to preventative maintenance with a simple digital work management system.

Make data-driven decisions

Track all maintenance work and asset costs in a clean database to make informed decisions on finances, labor allocation, and productivity. Fiix's real-time dashboard and reporting tools are designed to provide you with advanced maintenance and operations insights, and even help you easily pass client audits with a tracker that automatically stores work history and makes it accessible when you need it most.

Connect to any business system

Facilitate cross-departmental business intelligence and automate machine monitoring to support condition-based and predictive maintenance. Built on a completely open cloud platform, Fiix's Integration Hub makes it easy to connect to any application and sync data and workflows in endless ways.
