

Scalable, secure and reliable chatbot solutions with your enterprise data.

Deployed by Finchloom

Azure OpenAI ChatGPT with Enterprise Data

With Finchloom's Templated Base Deployment of Azure OpenAI, you can unleash the power of your own version of ChatGPT against your own enterprise data. Run secure searches against existing files to summarize, develop insights, and even generate code.

Why Azure OpenAI ChatGPT?

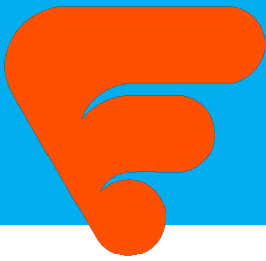

- Summarize and analyze company data
- Conversational AI for Service bots with enterprise-level knowledge
- Accelerate ideation and writing
- Advanced data mining
- Faster software development and code generation
- Assisted employee onboarding

Why Finchloom FLIGHT

Finchloom is a 100% Microsoft focused Professional Services and Cloud Services Provider (CSP).

Copilot Readiness for Microsoft 365 is imagined as a 3- or 6-month FLIGHT, our level-pay professional services program.

After implementation, you may transition into Finchloom+ Managed Services.

FINCHLOOM

Azure OpenAI ChatGPT with Enterprise Data

FLIGHT delivers consistent expert engineering on complex Microsoft projects, on-time, and on budget. The Copilot Readiness project is estimated at \$45,000 for 3-months. Your organization's roadmap may differ. Contact us today to start.

Azure OpenAI Engagement Overview

The project leverages the Azure cloud infrastructure and the OpenAI API to provide scalable, secure and reliable chatbot solutions for various domains and use cases.

After evaluating your motivation and objectives for Azure OpenAI — from enhancing customer experience, reducing operational costs, and improving business outcomes — FINCHLOOM will review and configure:

- Azure Open AI Architecture features and functionalities
- Basic Chatbot Deployment and Configuration
- Web Interface or Teams Chatbot integration with Logging
- Complete IT Administrator Training on terminology and maintenance
- Recorded End User Training for Prompt Engineering

What You Can Expect

At the end of the project you should expect a fully functional chatbot application that can handle user queries and requests in natural language against sample enterprise data.

Your team will have a strong understanding of the concepts and implementation of Azure Open AI, along with a document that describes the design, development, deployment, and testing process of the chatbot application.

- 🐦 Effortless Projects
- 🐦 Flexible Scope
- 🐦 Secure Virtual Environments
- 🐦 Flat Monthly Rate
- 🐦 Architects & Senior Engineering
