Microsoft

DNS & Safe Sender Enablement for Microsoft 365 Mail

Configuration and 1-Month Monitoring Packaged Solution

Who is this for?

- Commercial Businesses based in the USA who have an IT Department and use Microsoft 365 for Email
  - And wish to protect their Email domain from spoofing and protecting the company brand by proving who and what is allowed to Email on your behalf

Email Challenges

Email Domain Spoofing

> **65%** of domains are spoofed all the time

> Monitoring and reporting are challenges to know when a domain is spoofed

## Increase in number and sophistication of attacks

> **84%** of IT Admins find it difficult to maintain up-to-date records

Complexity managing multicloud environments

> **98%** of organizations don't realize this simple step to protect your organization

Add DMARC, DKIM and SPF protection to your Microsoft 365 Email

DMARC

DMARC authenticates emails, preventing domain spoofing and phishing.

DKIM (DomainKeys Identified Mail) cryptographically verifies sender authenticity.

SPF Sender Protection Framework) allows email sender validation.

Enhanced with Generative AI

DevOps CWP CIEM EASM

DKIM, SPF

Integrated insights

SIEM	Defender for Office 365	Workflow automation	Ticketing and collaboration

We'll help you get started with your Domain Monitoring
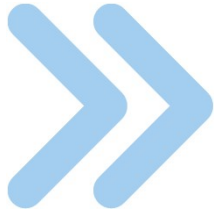

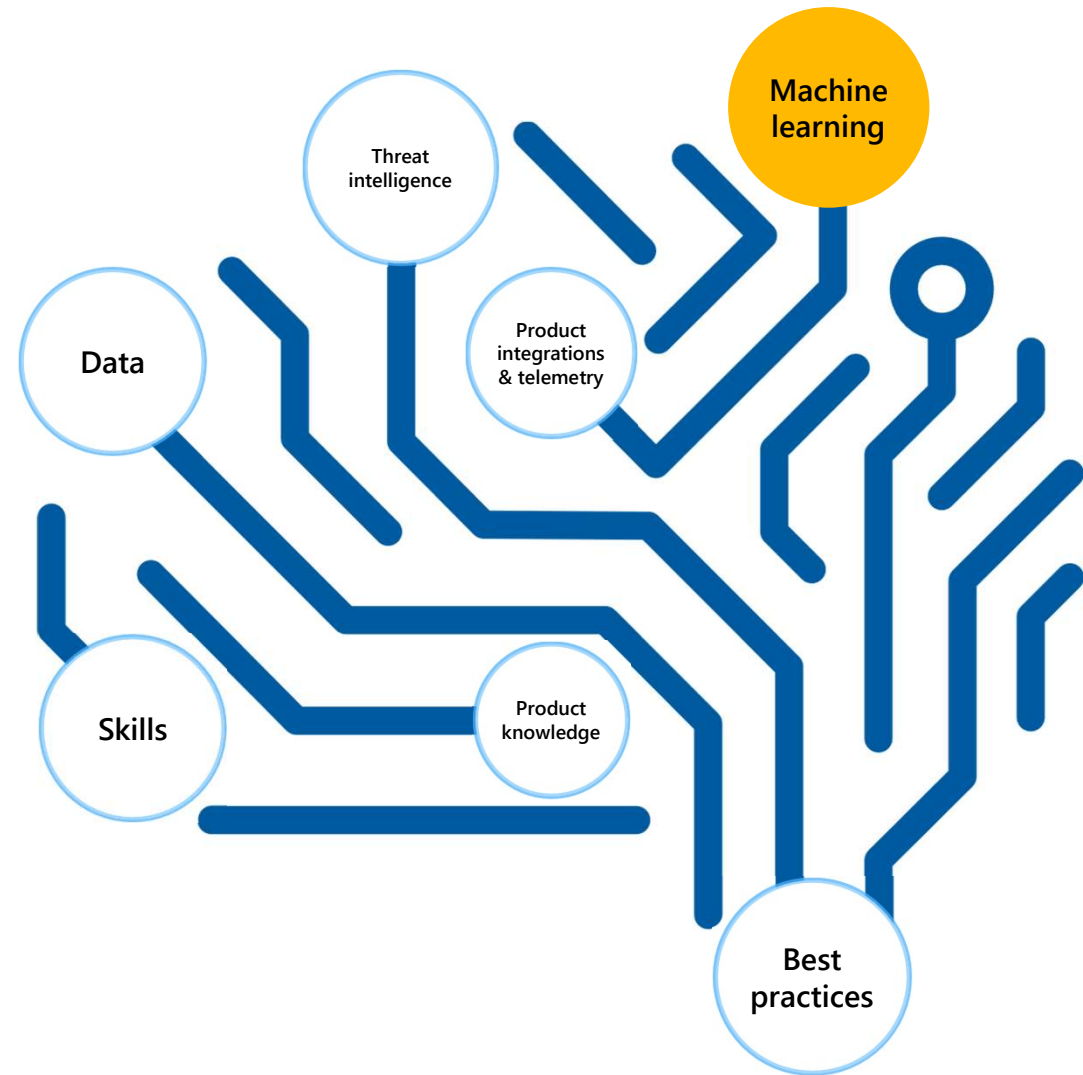

Setup protection

Monitor for 30 days

Update and harden.

The Finchloom Way

Our Expert Exchange/DNS Architect will configure your settings to harden your Email Security, then monitor the service for 30 days to find false registrations.

We will then help remediate by blocking the false registrations and harden your Email Security further.
