The Challenges

Automating trade booking, that is, **processing of the trades in the Treasury management systems** is highly essential. Processing trade is more than entering trade data, as involved resource requires understanding of asset classes, market rates and trade-lifecycle. Handling different stages of trade process and the entire trade settlement process is challenging today.

Automatic Processing of Preferential rates

Real-time fetching of data

Real-Time Monitoring of trades

Effective Management of Market data & Static Data

Accuracy in trade processing
