Eliminate threats before they cause harm.

The Key Features

Collect:

Collect data at cloud scale – across all users, devices, applications and infrastructure, both on-premises and in multiple clouds.

Detect:

Detect previously uncovered threats and minimise false positives using analytics and unparalleled threat intelligence from Microsoft.

Investigate:

Investigate threats with AI and proactively hunt suspicious activities at scale, tapping into decades of cybersecurity work at Microsoft.

Respond:

Respond to incidents rapidly with built-in orchestration and automation of common tasks.

Costly to operate and slow to scale, resource-heavy Security Information and Event Management (SIEM) infrastructure and tools have become obstacles to modern digital transformation. With growing volumes of data strain, and alert fatigue hitting all-time highs the limits of on-premises systems and managing those same systems create a huge operational burden for Security teams.

That's why Microsoft developed Azure Sentinel, a fully cloudnative SIEM designed to serve all four aspects of security operations.

Microsoft Sentinel is your birds-eye view across the enterprise. Putting the cloud and large-scale intelligence from decades of Microsoft security experience to work. Microsoft Sentinel makes your threat detection and response smarter and faster with Artificial Intelligence (AI).

Built on Microsoft Azure, a leading public cloud platform, Microsoft Sentinel eliminates infrastructure and management complexity. It scales readily to meet your organisation's dynamic needs. Microsoft Sentinel offers tools for all members of your security team, maximising their skills with intelligent, role-based tools. And, it empowers you with insights from Microsoft's global security operations.
