# FluentPro G.A. Suite

These days, Project Online environment change management practices often result in high costs and significant time spent. This is mainly because change cycles and data management are performed manually, slowing the process, and causing errors. As well, companies often lack knowledge of ITSM best practices and an understanding of how to effectively apply this knowledge to their company's processes.

On top of this, organizations are trying to avoid data losses and protect Project Online and SharePoint sites. Most of them are using more than one tool and resource that set back the implementation of technical solutions that address data protection issues and prevent data loss disaster.

*FluentPro Governance and Administration Suite (G.A. Suite)* solution help companies establish Office 365 Project Online practices in compliance with ITSM and provide usage and adoption analytics and governance capabilities for decision-makers and PMO. Moreover, the solution provides tools to backup/restore/archive data, manage the Microsoft Project Online configuration lifecycle, and helps organizations implement governance practices for Microsoft Office 365 PPM solutions.

# Business Values

Enhance project management processes by establishing ITSM-compliant best practices in your organization.

Access deeper insights about PWA usage and adoption, excellent governance capabilities for executives and PMOs.

It reduces time spent on PWA administration, eliminates costs related to human errors, and increases Microsoft Project Online usage efficiency.

G. A. Suite provides a complete automated toolset for effective Project Online backup and disaster recovery and reduces the risk of data loss.

As part of the product license, it provides decision-makers with deeper backup and restore analytics using Power BI reports for organizations and PMOs.

Using our proprietary technologies running on secure, stable, and innovative Microsoft Azure, G.A. Suite combines configuration management, migration, and data management tasks with the capability to backup and restore Project Online configuration, data, and SharePoint content. Create multiple backup plans, restore when required, and conduct a full or partial backup by schedule or on-demand.

*How G.A. Suite helps organizations like yours better protect data?*

*Project Online Governance*

- Copy PWA environment
- Visualize services topology
- Document PWA configurations
- Backup and restore projects, SharePoint sites, and PWA configuration
- Deploy and move configuration changes to Project Online PWA
- Archive data

*Switch Data Protection / Backup*

- Create a backup schedule for projects and SharePoint sites
- Perform an on-demand backup
- Restore data from a backup copy
- Copy PWA configuration from one PWA to another
- Copy project plans and sites from one PWA to another
- Generate PWA configuration documentation
- Compare two PWA configurations
