

LENS™ Learning Analytics & Data Warehouse provides all stakeholders a unified solution for actionable insights.

Education struggles under the weight of disorganized, siloed data - making it difficult, if not useless, for making informed decisions. FocalPoint organizes siloed data to make it useful:

- Organize assessment data from all 3rd party vendors and make it actionable
- Connect all your applications and log into a single, integrated platform with single- sign-on (SSO) and Learning Tools Interoperability (LTI)
- Stakeholders see data holistically to inform learning - longitudinal data reporting with operational formative assessment data
- Data visualizations that make sense by displaying formative, summative & local assessment results along with additional data such as attendance & discipline
- State curriculum standards Mastery Performance Tracking - drill-down and sort results by school, grade & multiple subgroups
- Early Warning Indicators for close progress monitoring of key indicators such as attendance, discipline, reading & math
- Intuitive ad hoc reporting - allow users to create and share custom reports
- **ARIA - AI-Powered Data Interaction** - Enables users to query the data using natural language, delivering instant, role-based insights without the need for technical expertise.

LENS works in tandem with most assessment & technology resources...

Plus, LENS integrates seamlessly with Student Information Systems

...and many more.
