

RapidClaw — OpenClaw AI Agents for RapidStart CRM

Ten AI agents deployed in your Azure tenant, accessible from Teams and their own email inboxes.

RapidClaw brings **OpenClaw** — the open-source AI agent framework — directly into **RapidStart CRM**. Agents qualify leads, chase stalled deals, triage support cases, map relationships, and monitor account health. Every outbound email passes through an approval queue — you review, edit, or reject before anything sends.

The Agents

- **Quinn** — Scores leads, drafts qualifying replies, hands qualified leads to sales (email-enabled)
- **Morgan** — Watches for stalled opportunities, drafts contextual nudge emails (email-enabled)
- **Jordan** — Triage cases, finds similar closed cases, drafts acknowledgement replies (email-enabled)
- **Alex** — Monitors account health: engagement drift, case rate, pipeline changes
- **Casey** — Tracks contact responsiveness and flags champions who've gone dark
- **Riley** — Maintains the relationship map: who talks to whom, coverage gaps
- **Cody** — Builds Power Platform flows, forms, and customizations on demand

Key Features

- Full OpenClaw deployment in your Azure tenant
- Approval queue — every outbound email reviewed before sending
- Agent mailboxes on your domain (Quinn, Morgan, Jordan)
- Microsoft Teams integration — chat with any agent
- Azure OpenAI with GPT-4.1 in your region
- Persistent agent memory backed by Dataverse
- Global kill switch and per-agent controls
- Set up in under 30 minutes — no code, no CLI

Requirements

- **RapidStart CRM** — Free add-on for RapidStart CRM
- **Azure subscription** — Deploys into your own tenant

Pricing

The add-on is **free**. AI inference costs are metered to your Azure OpenAI deployment — you pay Azure directly for the tokens your agents use.
