

About

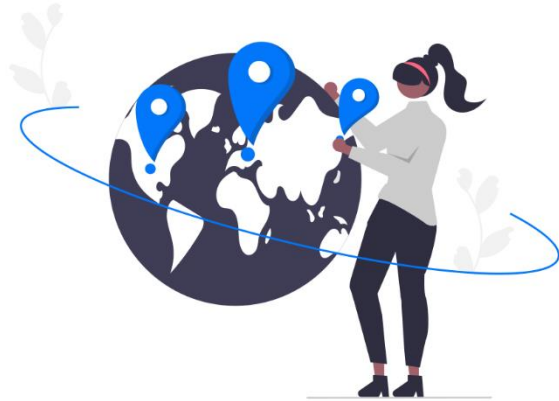

Mition is a SaaS offering to market, owned by the company **Formition Pty Ltd**, an internationally award winning & Australian based digital company.

Mition is specialist product specifically designed for the Association and NFP space, it has the goal of making it cheaper and easier to provide the highest level of service to the end member and staff. Ease of business is at the forefront of every decision Mition Control makes.

After a long-standing career working with large associations & NFPs' it became evident that to help a greater number of organisations to be successful, we needed to create a solution that meets our existing clients' requirements 'out of the box' removing the costs and complexities of multiple software solutions that large organisations use daily.

Mition is now **the** ultimate membership system. Built with modern features as standard. It is cloud based, which means that it is always available, always up to date, never requiring you to upgrade to 'a latest version'. Mition is ever evolving, with new features and benefits added to support our engaged community, meeting the latest trends in marketing and digital experience.

Our team takes on all the complexities of IT while delivering a system that *just works* all of the time and is consistently budget friendly.

As every organisation is unique, our system allows organisations to use their own domain name, colour scheme and have full control over their own content, staff, and members.
