

# Azure OpenAI services Proof of Concept

## Service highlights

-  Get quick access and benefit from a PoC showcasing Azure AI capabilities, scenarios.
-  Understand Azure OpenAI and its features better through an initial briefing.
-  Best security practices while setting up, deploying and accessing your Azure OpenAI.
-  Feel the power of Azure OpenAI (GPT 3.5, GPT 4 and DALL-E) and integrations.
-  Leverage a private GPT chatbot for secure, internal use with your company's data.

## Make it secure

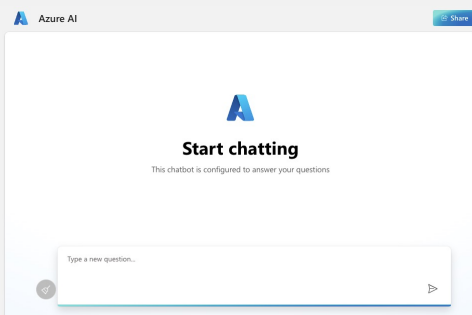

Unmatched Security: With Azure OpenAI, your data is protected by Microsoft's robust security measures. The platform is designed with multiple layers of security, ensuring that your business's sensitive information is handled with the utmost care.

## Make it private

Privacy-First Approach: Azure OpenAI ensures the privacy of your business data. With features like private deployment of chatbots, your company's sensitive information is used securely, providing you with a private, safe environment for your AI operations.

## Make it your own

With Azure OpenAI, you get a private ChatGPT web application deployed on Azure. This application is equipped with Microsoft EntraID authentication, adding an extra layer of security, and ensuring only authorized users can access and interact with your business's private chatbot.

## Azure Components used:

- Azure OpenAI
- Azure App Service
- Azure Blob Storage
- Azure Cosmos DB
- Azure Monitor
- Azure Key Vault
- Azure Application Insights
- Microsoft Entra ID
