

AZURE MIGRATE ASSESSMENT OFFER

A unified approach to cloud migration and modernization

Overview

Azure Migrate is a **comprehensive service** that helps organizations assess and migrate their on-premises infrastructure, applications, and data to **Azure**. It provides a **unified platform** with a range of tools to simplify and streamline the migration process.

Benefits

Simplified Migration: Streamline the migration process with a unified platform that integrates multiple tools and services.

High-Level Analysis: Perform high-level virtual machine portfolio scanning without requiring access to application code.

Cost Estimation: Provide accurate cost estimations based on the actual environment, helping to plan and budget effectively.

Customizable Rulesets: Tailor assessments to specific use cases with customizable rulesets.

How it works?

1. **Discovery:** Identify and catalog on-premises resources using Azure Migrate's discovery tools.
2. **Assessment:** Evaluate the readiness and estimate the impact of migrating to Azure using performance-based or as-is assessments.
3. **Migration:** Execute the migration plan with detailed guidance and support from Azure Migrate.

Why Choose Azure Migrate?

1. **Unified Experience:** Manage all migration activities from a single platform.
2. **Comprehensive Tools:** Access a wide array of tools for different migration scenarios.
3. **Expert Guidance:** Benefit from detailed recommendations and best practices for a successful migration.

Key features

Centralized Hub

Azure Migrate offers a centralized hub to track discovery, assessment, and migration activities.

Comprehensive Assessment

Perform assessments for various scenarios including Azure VM, Azure SQL, Azure App Service, and Azure VMware Solution (AVS) migrations.

Performance-Based Recommendations

Get VM size recommendations based on CPU and RAM utilization, and disk type recommendations based on IOPS and throughput.

Application and Code Assessment

Assess Java and .NET applications for replatforming, automatically identifying dependencies and generating comprehensive reports.
