

Stop Choosing Between Cost and Innovation

FinOps Observability

Fortified builds FinOps Observability Software. Bridging the gap between financial and technical teams, by provide real-time insights that empower smarter, more strategic decision-making.

Built for Database Pros

Fortified WISdomTM, a FinOps Observability tool built for database professionals, unifies cost efficiency with database performance by offering actionable metrics on data cost, performance health, and capacity planning. WISdom empowers you to accelerate delivery timelines, scale resources, and reduce costs.

How it Works

See More, Do More

Instantly gauge the health, efficiency, and data cost metrics of your systems with intuitive, easy-to-understand dashboards.

Unified Health Scores

Simplify database health with single scores for CPU, Memory, Storage, and Database Contention. Turn data into decisions with clear, concise workload health indicators.

Plan for Peak Workload

Leverage a top-down optimization strategy to tackle code inefficiencies, blocking chains, and deadlocks, ensuring your enterprise operates at the peak of its capabilities.

"WISdom improved an issue we were having internally, and then solved that issue. It allows us to highlight our problems and solve them quickly."

Amy Abel
Advanced MD

Beyond Alerts: Cut the True Cost of Data with WISdom

WISdom is not just another monitoring tool; it's your solution to transforming data into actionable insights. By leveraging advanced machine learning and analytics, WISdom alerts you to anomalies, diagnoses the root causes, and recommends solutions to not only fix issues but prevent them in the future. This proactive approach to database minimizes downtime, streamlines troubleshooting, and empowers better decision-making.

Bridge Your Teams with Enterprise Visibility

Fortified WISdom fosters a collaborative ecosystem that bridges developers, DBAs, and infrastructure teams. Through a centralized dashboard, each team gains a comprehensive view of the database environment, allowing for a cohesive approach to resolving issues. Developers can see how their code affects databases, DBAs can pinpoint performance issues, and infrastructure teams can monitor server health.

Take the first step with a Fortified Assessment.

Reduce downtime, cut data costs, enhance performance by up to 1000%, expand capacity without expensive hardware, and fortify security, **all in one powerful review.**
