

Optimize Your Code and Save the Environment

See What Others Cannot

For database developers, the efficiency of your code directly impacts the bottom line. With Fortified WISdom, discover the power of Workload Intelligence to optimize your code, reduce cost of data, and save the environment.

The Fortified Approach

The age of abundance in technology is over. Fortified Insight specializes in database efficiency to unlock opportunities with technology. Our flagship software, WISdom, provides transparent and intuitive data to help you understand the value technology brings to your business.

How it Works

Understand the Cost of Code

Code and data live for years and have a true cost. What is the costliest code in your environment? Start optimizing with WISdom.

Optimize with Precision

Target the most impactful areas for optimization, from top code inefficiencies to blocking chains and deadlocks, reducing resource demand across the enterprise.

Plan for Peak Workload

Leverage real-time data to make informed decisions on database server sizing, avoiding over-provisioning and underutilization.

“WISdom improved an issue we were having internally, and then solved that issue. It allows us to highlight our problems and solve them quickly.”

*Amy Abel
Advanced MD*

Beyond Alerts: Cut the True Cost of Data with WISdom

WISdom is not just another monitoring tool; it's your solution to transforming data into actionable insights. By leveraging advanced machine learning and analytics, WISdom alerts you to anomalies, diagnoses the root causes, and recommends solutions to not only fix issues but prevent them in the future. This proactive approach to database minimizes downtime, streamlines troubleshooting, and empowers better decision-making.

Bridge Your Teams with Enterprise Visibility

Fortified WISdom fosters a collaborative ecosystem that bridges developers, DBAs, and infrastructure teams. Through a centralized dashboard, each team gains a comprehensive view of the database environment, allowing for a cohesive approach to resolving issues. Developers can see how their code affects databases, DBAs can pinpoint performance issues, and infrastructure teams can monitor server health.

Take the first step with a Fortified Insight Assessment.

Reduce downtime, cut data costs, enhance performance by up to 1000%, expand capacity without expensive hardware, and fortify security, **all in one powerful review.**
