

# Cloud Migration Assessment: 1-Day Evaluation

## OVERVIEW

Quickly and efficiently discover which elements of your infrastructure can be moved to Microsoft Azure without impacting your business. This service provides you with clear understanding of which services are cloud ready, and which services may require further planning.

This service is ideally suited to the discovery phase of a Cloud Migration workstream and will provide Project Managers and stakeholders with information to inform project planning activities.

## SCOPE OF SERVICE

As part of this engagement, we will work on site directly with your IT team to deliver the below services and guidance:

- Understand the current corporate IT landscape
- Run audit tools to generate the Cloud Readiness Assessment report
- Prepare a Cloud Readiness Assessment report, including a bespoke narrative detailing our recommended approach towards migration, and any challenges we have identified.

Once the report has been delivered, a follow up call will be scheduled to discuss the report's contents, and the proposed next steps for migration activities.
