

## Windows Virtual Desktop

### Overview Workshop and Suitability Assessment

#### Introduction:

Windows Virtual Desktop presents an opportunity to deliver Desktops and Applications from Microsoft Azure. If you are a M365 customer, you have access to the WVD platform at no additional cost.

There are a number of use cases for WVD, these include but are not limited to:

- Organisations running on-premise VDI or RDS and have an initiative to adopt cloud platforms
- Organisations with remote staff looking to provide a flexible, yet secure remote access solution.
- The ability to provide a more robust Disaster Recovery and Business Continuity option for staff.

## Workshop Overview:

This half day semi-structured workshop will consist of presentations, demonstrations and discovery discussion. The agenda will include:-

- Overview to WVD platform
- Review of the WVD technical architecture
- WVD commercial structure
- Adoption pre-requisites
- Core use cases
- Platform limitations & partner ecosystem
- Platform demonstration

## Benefits:

This workshop will provide organisations with a thorough understanding of Windows Virtual Desktop as a solution offering and help organisations establish where WVD may and may not fit for their user base.

The workshop is perfect for organisations that want to know more about WVD and starting to explore whether there is a business and use case for it within their organisation.

## Deliverables:

Outside of the content presented within the workshop, FIT will conduct a high-level assessment of WVD's suitability within the client environment along with supporting recommendations.
