

MDR FOR MICROSOFT SENTINEL

Key Benefits

A trustworthy extended team with **certified experts**

Highly customized contents for customer needs

Leverage **data analytics** and **Microsoft technologies** to increase productivity

Clear metrics and reports to measure success

Fast time-to-value with a **blazing fast onboarding time** of less than a week

Security Is a Data Problem

Security teams are experiencing the impact of the Data Age: rapid digital transformation, most notably an aggressive shift to cloud. The complexity of the threat detection landscape continues to grow and current efforts to combat this trend are insufficient

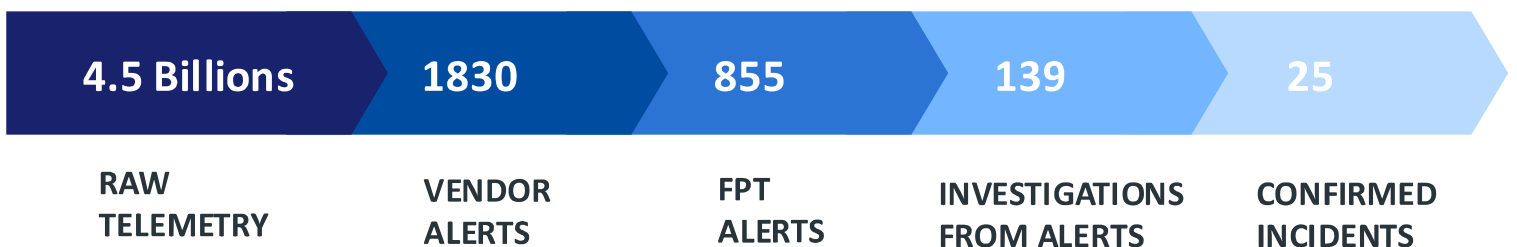

54% enterprise feel they are forced to **ignore security alerts** worthy further investigation because **they don't have staff and experience** to handle them.

We handle emerging threats so you can focus on critical business-centric missions

Security team simply cannot manually analyze thousands of alerts per day. That's when our team of expert's steps in to help you implement a robust threat detection and response function, allowing you to focus on operationalizing your evolving business.

We leverage Microsoft security technologies with advanced automation and data analytics to respond quickly and remediate to confirmed incidents and keep your cybersecurity program on pace with potential harms.

With FPT Security Operation Platform - AlertIQ, we reduce significant number of alerts, eliminate noise and help customer only spend time on real threats while focusing on business-critical missions.

This is the actual number from our customer with 2000 endpoints.

We go above and beyond what is expected of us.

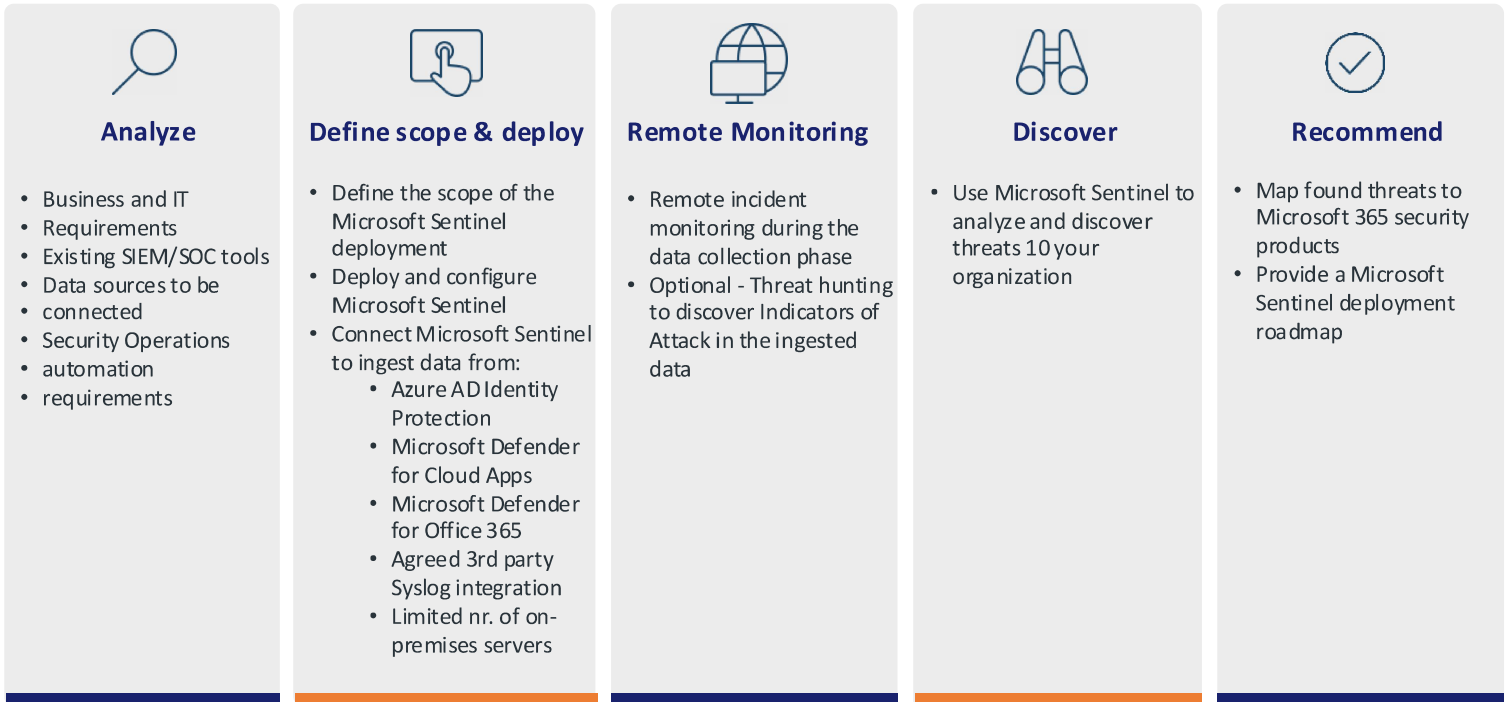

We integrate every **Microsoft Sentinel** alert into **AlertIQ** and enrich, suppress, and correlate them against known patterns. Identified threats are blocked, and anything suspicious is highlighted.

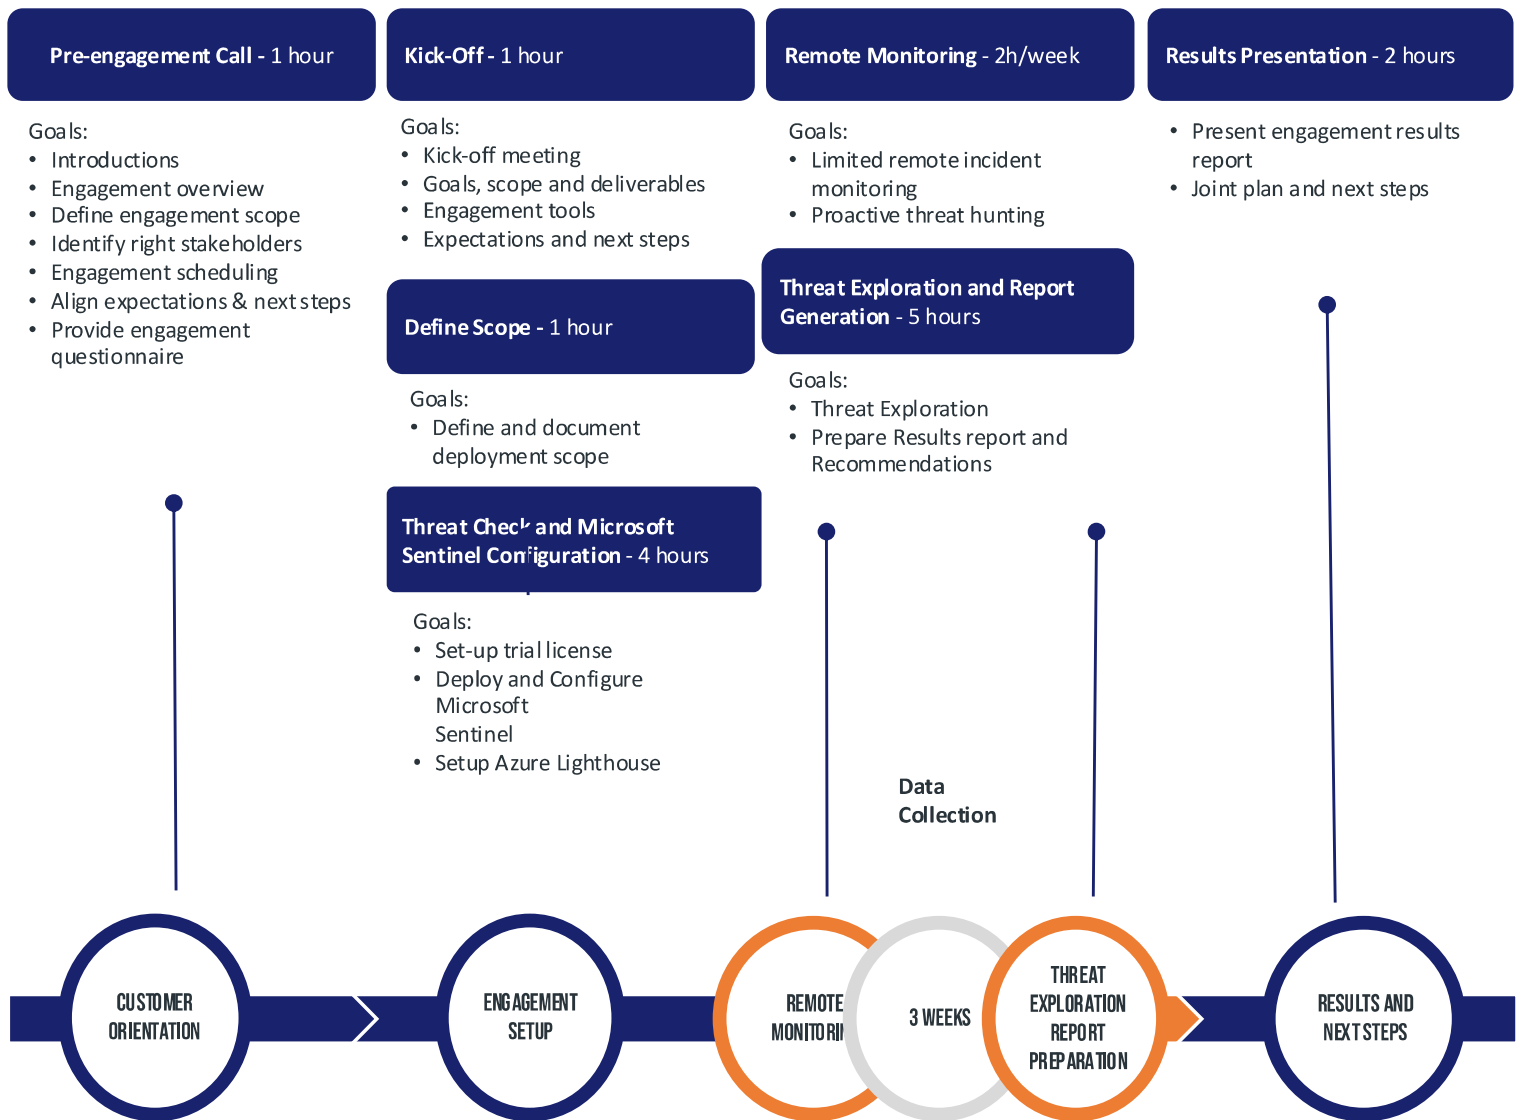

AlertIQ MDR services work in conjunction with **Microsoft Sentinel** to detect every event, resolve every alert, and escalate only the alerts that are relevant to you. We provide you with **full operational capability** for threat detection and response, while also increasing the **efficiency** and **productivity** of your security operations team.

Analysts at our **Security Operations Center (SOC)** investigate and respond proactively on your behalf to stop the attack. Then, our analysts collaborate with you to remediate the issue within minutes.

Our process

MDR FOR MICROSOFT SENTINEL

Why FPT Software?

We are security practitioners who truly understand the stress of protecting an organization against cyber-attacks. We are using everything we've had, our business resources, technology, expertise, and our heart, to keep our clients focused on their important mission. We exist to bring the best information security solutions to the world's leading companies through professional people delivering innovative approaches in many industries such as Energy, Finance, Healthcare, Retail & Distribution and Manufacturing...

FPT Software, a member of the **Microsoft Intelligent Security Association (MISA)** with an Advanced Specializations in Cloud Security, Threat Protection and Identity and Access Management, offers unlimited opportunities in a professional working environment, applying the latest cutting-edge technologies from Microsoft to solve the most challenging security problem for the global leading companies.
