

AI-Powered Healthcare Document Platform

Transforming Healthcare Documentation with AI Agents & AI Applications

33.4%

Reduction in Admin Tasks

2.5h

Daily Time Saved per Physician

Core Platform Capabilities

AI Data Extraction

LLM and RAG extract data from notes and forms

Customizable AI Agents

Create **mutiple** tailored Agents for clinical/administrative needs.

Smart Note Generation

Generates structured notes from input data efficiently.

Customizable Templates

Library of templates for clinical and administrative use

Compliance Checks

Real-time audits for HIPAA, GDPR, and others

EHR Integration

Enables smooth data exchange with existing health record systems.

How It Works: User Workflow

Upload Context

Document, Audio, Voice input.

Process Management

AI Framework handles tasks to create accurate documents.

Ensure Compliance

Automatically meets regulatory standards

Review and Edit

Check and adjust documents as needed.

Download Ready Files

Get finalized documents for use or EHR integration.

AI Architecture

AI Agent Orchestration

Modular framework with **orchestrator AI** coordinating customizable worker **AI agents**

Knowledge Base Library

Each agent has **dedicated RAG library**, retrainable with facility-specific data

Input Methods

Text, document upload, voice input, API integration (FHIR-compliant)

Resolved Pain Points

Administrative Burden

Reduces non-patient-facing tasks with **AI ingestion** and **Transcription**

Data Errors

Cuts errors in notes and in forms with **real-time validation**.

Financial Impact

Lowers claim denials and speeds reimbursement by **40%**.

User Resistance

Simplifies adoption with **mass form integration** and intuitive design

Business Value

\$25B

Annual US denials savings industry-wide

75%

Reduction in compliance audit time

48%

Reduction in billing staff workload

\$350K

Saved in potential penalties (500-bed hospital)
