# One Control Tower

One Control Tower effectively drives warehouse operations by combining data from multiple sources like warehouse management system, transport management system, sap to consolidate all the operational decision making in the warehouse under one activity pilot through dashboards, cockpits, features.

It synchronize processes, machines, resources within a warehouse using automation and digitization. This results in improved throughput, efficiency, better resource management and optimized operational costs

Transport Management System

Local Tools

SAP

Warehouse Management System

Warehouse Brain

Digital Cockpit Dashboards

Features Automation

Pilot

Allocate Forklifts, Monorails

Allocate Shipments to Staging Location

Allocate Trucks/Trailers to specific warehouse doors

Automate Actions like assign trailers, doors
