

FRAGMA DATA

# VisionBot

## Document Capture for the AI era

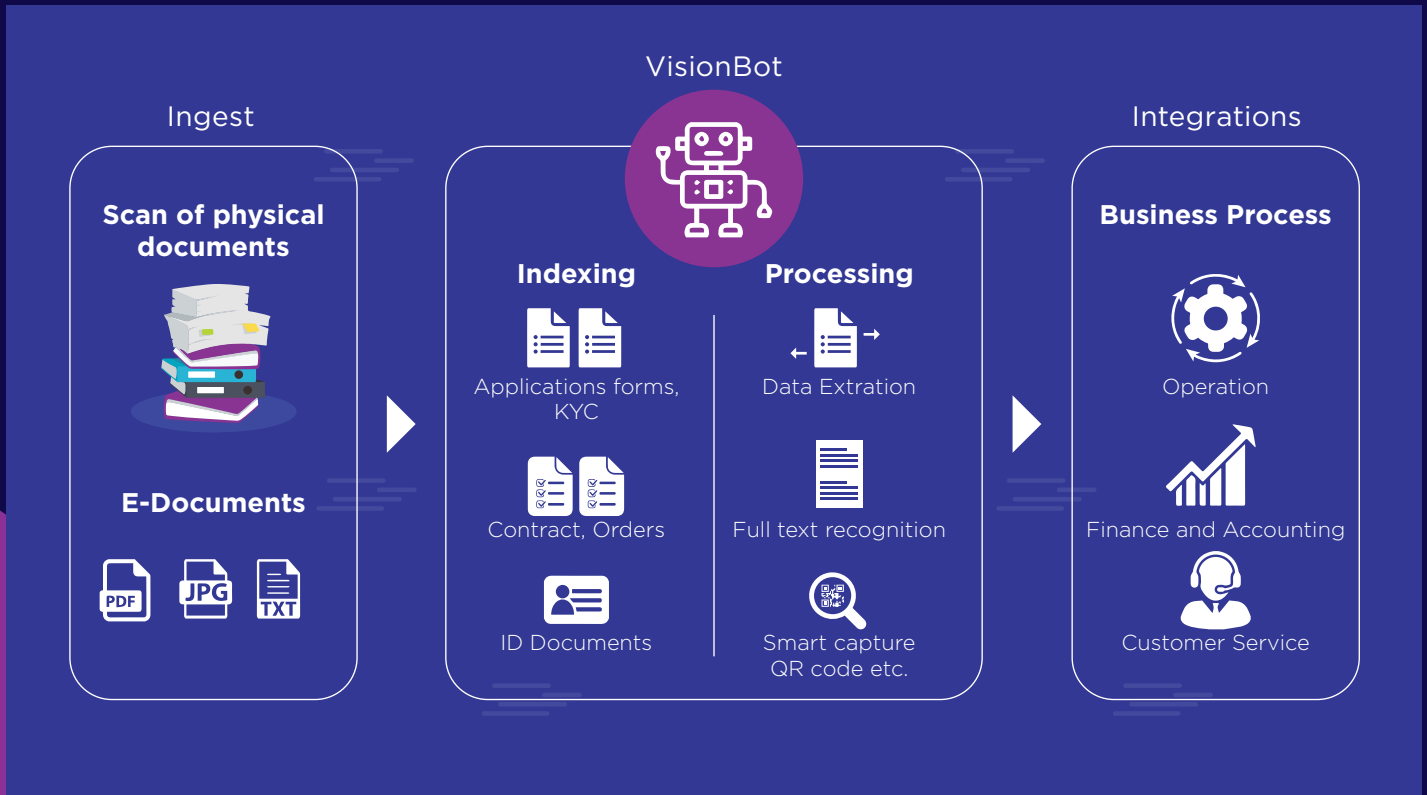

AI systems take a new approach to understand information through the continuous learning, reasoning and evaluating progress. Traditional document management systems often lack this ability, making it difficult to classify and extract data from today's highly variable paper and digital document formats without any manual intervention.

Our AI product, VisionBot, enables enterprises to capture documents as they enter the organization, automatically classify and extract information—including text, photos, and handwriting—from complex and variable documents in real time.

# Eliminate Data entry and **automate document classification and extraction**

Organizations dealing with physical documents face difficulties in digitizing documents for the fulfillment of business processes and routinely depend on manual data entry to digitize documents.

VisionBot helps you streamline the capture, recognition, and classification workflows of business documents and extract important information. It uses image processing, machine learning, and artificial intelligence to automatically identify, classify, extract content from unstructured or variable documents and automate workflows -all at a fraction of the time required by human.

# Delivering **value**

Index and Extract information from large volumes of documents

Serve your present customers better

Manage spikes in business cycles for processes where TAT is crucial & are not readily scalable

Free up human resources for other work

Aids in meeting regulatory compliance requirements

Deliver business faster to the customer by automating form processing

Enhance productivity

Attract new businesses and customers

## Streamline all document capture workflows with **VisionBot**

### Standard Documents

- Digitize standard documents customers upload such as passports, visa, AADHAR , etc.

### Customized documents

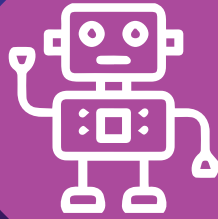

- Extract information from custom forms such as application forms, KYC forms, account opening forms.

### Invoices and Orders

- Index invoices and Account statements based on meta-data for unstructured layouts
- Extract information from structured or semi-structured invoices and statements.

# Unleash the power of **Unstructured Data**

## Cutting-edge features for enhanced capabilities

- Plug and play capability for standard documents, including Passports, Visas, National ID cards, Aadhar card, Voter ID card, etc.
- 100% customization for extraction of new documents is possible.
- Seamless integration with existing applications.
- Cloud-based AI solution, which is always evolving and improving in quality.
- QR coded form extraction supported.

## Customer Benefits

### Cost Savings

Reduce Document digitization Cost by 90%

### Automation

Extract data from any document without manual data entry

### Analytics

Derive insights from your unstructured data
