For The Record

Access evidence faster

Complete digital record available in seconds

Over 60% of courts use digital recording as their primary record capture. However, on average less than 10% of records are ever accessed. Today a judge can't review audio quickly to make a decision, attorneys are mailed CD's and payments are in cash.

What is For The Record?

For The Record gives customers access to 100% of their digital record. Our proprietary methods deliver machine generated text of over 90% accuracy, including speaker identification in busy courtrooms. Text is time-stamped to audio for rapid review and attorneys can obtain approval online via a PCI-compliant payment process.

Why customers use For The Record

- 90% accurate text available in minutes
- Judges make decisions and opinions faster
- Lower cost alternative to traditional transcription
- Complete suite of online services for court customers

Improved Caseload

- **Find evidence on-demand**
- No waiting for transcript
- Review from any location

> 90% accurate machine generated text

Enterprise Analytics

- **Discover what's happening in your courts**
- Analyze your content at scale
- Understand utilization of resources

60% of customers say data helped save the Court money

Enhanced Transparency

- **Online access for citizens**
- Embedded approval workflows
- Online payment processing

30% increase in public requests each month

"While the US Navy does not endorse FTR, we currently use its audio capture application for our courtroom proceedings. We have recently tested FTR's automated transcription service and intend to pilot test the solution to achieve time and cost savings relative to our current transcription processes." --- CAPT Matt Beran, JAGC, USN [Director of IT for the Navy JAG Community]
