

## Media Transcoder SaaS APP Documentation

The Media Transcoder APP is a SaaS product that optimize your media files like photos, gifs, audio, and video (including HLS video).

Our APIs transcode / convert / optimize image files like JPG, and PNG to compressed WebP format. It can create HLS video chunks and playlists. It can reduce the file size 100 times from the original file and around 3 to 5 times to already compressed files without visible quality loss.

**Please check our postman collection**
