# Copilot Studio Accelerate - 8-hour Proof of Concept

Discover the capabilities and benefits of Microsoft Copilot Studio and generative AI through this 8-hour, free Copilot Studio Proof of Concept (POC)

Microsoft Copilot Studio, along with the power of generative AI, offers a comprehensive set of tools that can enhance productivity and creativity across various domains. With this 8-hour, free Copilot Studio Proof of Concept (POC), users can explore the specifics of these technologies, learning their enormous potential firsthand.

This POC aims to show how Microsoft Copilot Studio can assist you in speeding up the creation and delivery of smart conversational agents that use natural language understanding and generative AI responses.

## By the end of this POC, you will see how we can:

- Easily and flexibly build custom copilots with Microsoft Copilot Studio
- Use the Generative Answers feature to let the copilot answer complex questions from different sources of data.
- Assess the quality and relevance of the answers produced by your Copilot.

We will demonstrate a custom copilot that we made with Microsoft Copilot Studio, and focus on a specific topic, finished in 8 hours.

The engagement agenda will be:

- A workshop to choose a use case based on your current business needs.

- Setting up the Generative Answers feature in Microsoft Copilot Studio using the data source decided in the workshop.
- Setting up to three topics using the default Copilot Studio NLU Model
- Personalized Greeting topic and Personalized Fallback topic
- A presentation back to you with a demonstration

Please note the following points for this POC, as it is not a complete solution delivery:

Our Proof of Concept (POC) for Microsoft Copilot Studio provides a tailored demonstration of how Microsoft Copilot Studio can address a specific use case. It's important to note that this POC is not the final product delivery. We utilize a Microsoft Demo Tenant for this purpose, which has a predetermined expiration date that we're unable to extend. Access to Microsoft Copilot Studio experience is available exclusively through the Copilot Studio Demo website channel linked to this Microsoft Demo Tenant."

This is a great chance to explore the potential of copilot and how simple it is to build custom copilots with Microsoft Copilot Studio.
