

SECURITY SERVICES

WEB APPLICATION SECURITY ASSESSMENT

A Web Application Security Assessment will help minimise the risk of data breaches which can be devastating to your business, both financially and in terms of company image.

Your web applications and servers will be examined to find security weaknesses and vulnerabilities that would give hackers an opportunity to damage or steal data processed in your system.

WHAT YOU WILL GET:

A report containing the following:

- Test results showing found issues, with clear reproduction steps
- An analysis of technical and business impact of uncovered vulnerabilities
- Actionable recommendations for fixes and issue mitigation

MORE THAN JUST OWASP TOP 10

Beyond testing for OWASP Top 10 security risks, we go deeper to make sure that the application is safe not only from external attacks, but also from malicious actions, such as accessing or stealing personal data by legitimate users who might exploit the elevation of privilege vulnerabilities in the system.

MAKE SURE YOU ARE COMPLIANT AND SAFE

Get your application ready for a compliance audit. Whether it's GDPR, PCI-DSS, HIPAA or SOX – our Web Application Security Assessment will help you ensure your applications process data in a secure manner.

WHAT IS OWASP?

The Open Web Application Security Project (OWASP) community is dedicated to enabling development, purchase and maintenance of trustworthy apps and APIs. Every year, the community publishes the updated OWASP Top 10 – a list representing a broad consensus about the most critical web application security risks.

FUTURE PROCESSING

Our headquarters in Gliwice, Poland

Future Processing is an IT services provider, specialising in solving business problems through technology by delivering complex solutions at every stage of the software production process: from needs analysis and solution design, through development, to product maintenance.

900+ employees
150+ clients in portfolio
18 years of experience

WHAT YOU GET FROM US

As IT partners, we can support you through:

- helping you in development of new and existing products with support from high quality outsourced teams,
- providing custom-made mobile, web and desktop applications that support your business objectives,
- modernising and replacing legacy systems to ensure you take advantage of modern technology,
- optimising your databases to help you make decisions that are based on reliable and relevant data,
- supporting and maintaining software that was created by us or other providers,
- providing managed security services that help you stay safe in an increasingly complex digital world.

A HIGHLY QUALIFIED SECURITY TEAM

We have built a strong team of security-focused engineers who are accredited by industry leading certifications, including: OSCP, CEH and CCNP. One of team members is in the top 15 of HackerOne All Time Leaderboard list. This continuously updated list, is comprised of people who found the largest number of security bugs in company websites and software available in the HackerOne platform.

We are an ISO 27001:2013 certified company.
