Power Automate Robotic Process Automation Workshop

August 2021
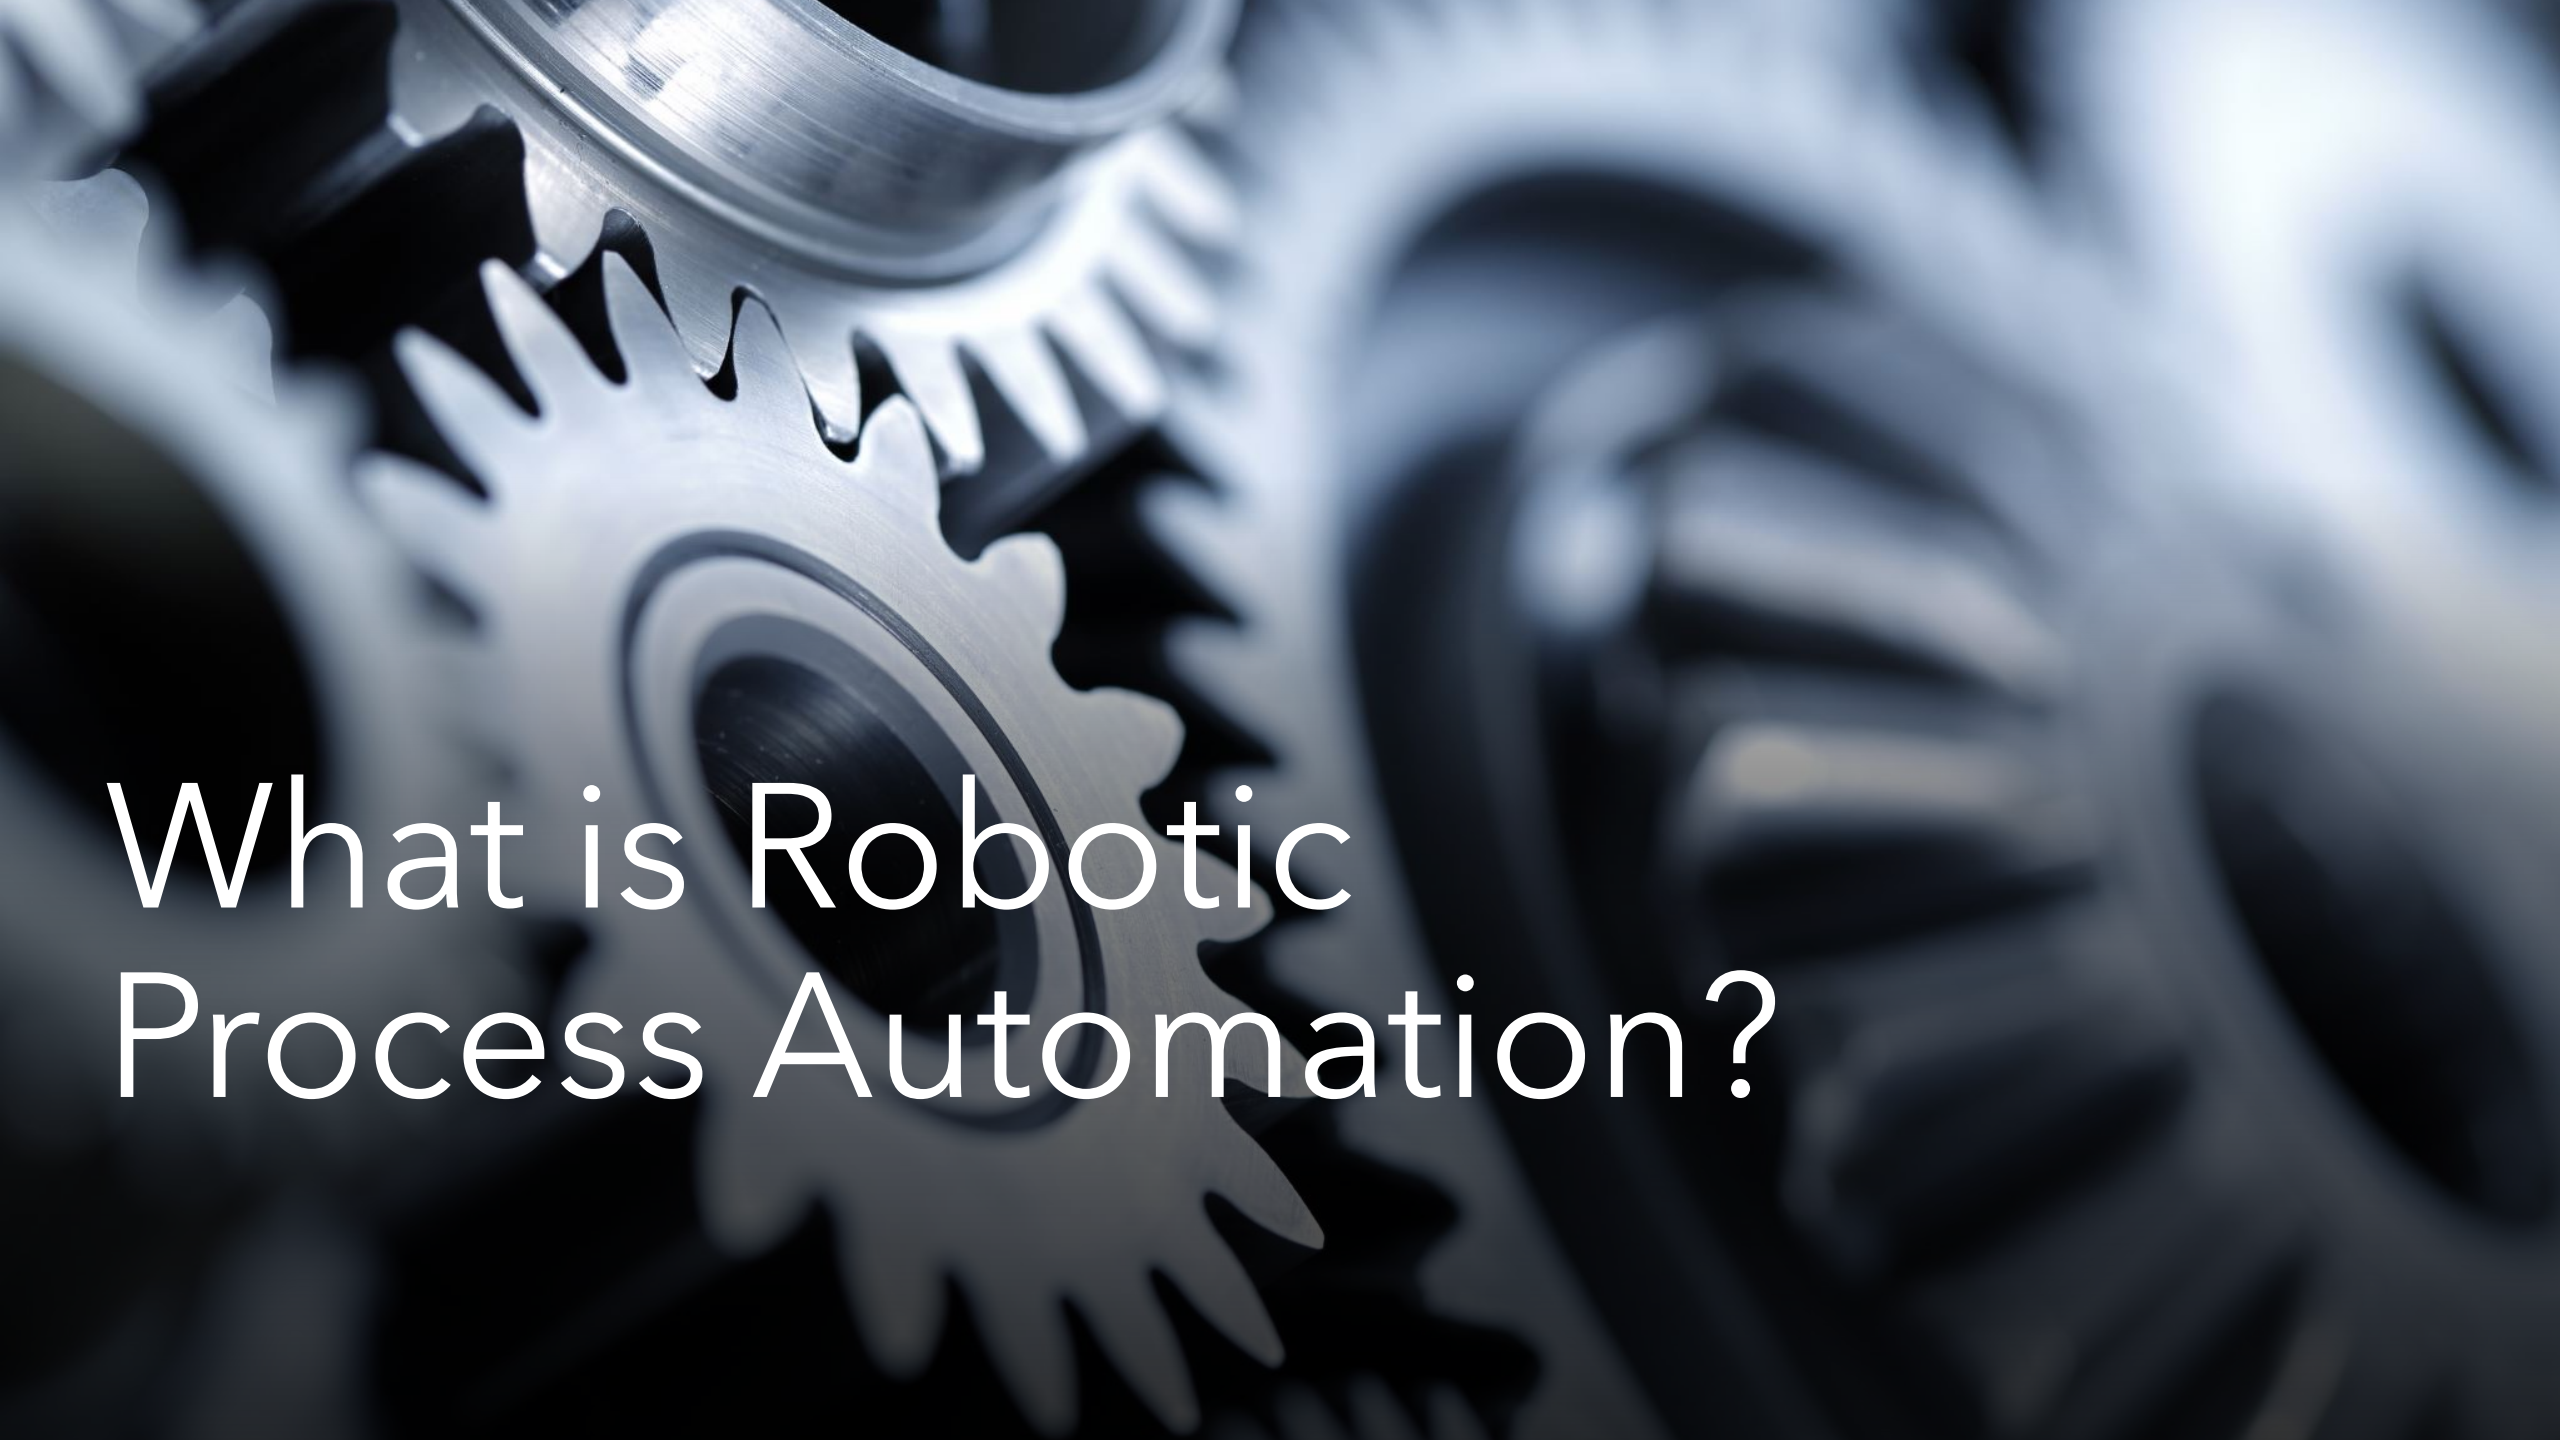

FutureWorkForce

Workshop Agenda

- Session 1:
  - What is Robotic Process Automation?
    - How will it help our business?
    - How does it fit with AI?
  - What is Power Automate?
    - Platform Overview
    - Use case examples
- Break
- Session 2:
  - Process discovery workshop
    - Building your capability
    - How to identify process candidates for automation
    - Draw up short list of process candidates for proof of value
    - Next steps and business case for proof of value

What is Robotic Process Automation?

Robotic Process Automation

- Robotic process automation (RPA) is a software technology that emulates human digital tasks

- It consists of a design platform, management centre and two different types of software robots. Unattended and Attended

- The software robots can understand what's on a screen, navigate systems, complete tasks, identify and extract data, faster and more consistently than people

- It's easy to build, deploy, and manage and the robots don't strike or have coffee breaks and can operate 24x7x365
