

APPLICATION MODERNIZATION ASSESSMENT: 4 WEEKS

Many companies' business applications are difficult to support, update or they are completely outdated, which drives up the costs and risks associated with delivering mission-critical innovations.

Our application modernization assessment will help you to make low-code part of your legacy modernization strategy. Understand low-code values on real example and evaluate its applicability for your organization.

During 4 weeks of assessment, we will collaborate with your team to evaluate your application portfolio and provide recommendations for a pilot application to modernize along with backlog, roadmap, and cost estimate for modernization efforts. With deep expertise in cloud native development, we will show you how to re-engineer your legacy applications to maximize the agility, reliability, and cost-saving benefits of low-code. As a result, you will get 1 chosen business application low-code prototype and applications modernization plan with implementation prioritization based on migration cost, complexity and maximizing ROI.

Agenda:

Week 1:

- Understanding customer's applications landscape.
- Relevant low-code applications examples presentation for key stakeholders.
- Evaluating relevant business scenario for 1st modern application prototype.

Week 3:

- Evaluating existing applications against business, functional, technical, and cost objectives.
- Reviewing application and organizational data needs, including migration requirements.
- Understanding existing architectural patterns, infrastructure, tools, and processes.
- Aligning team skills and filling gaps with modern development processes and technologies.

Week 2:

- Power Platform low-code tools training sessions with practical examples and knowledge sharing.
- 1st low-code application prototype development.
- Application prototype presentation for key stakeholders.

Week 4:

- Power Platform low-code tools training sessions with practical examples and knowledge sharing.
- 1st low-code application prototype development.
- Application prototype presentation for key stakeholders.

Deliverables:

- 1st low-code application prototype on chosen relevant business scenario.
- Power Platform low-code tools training sessions and best practices sharing.
- Complete application modernization plan with implementation prioritization based on migration cost, complexity and maximizing ROI from low-code technology.
