

Microsoft 365 Change Readiness

Optimize your Employee Experience with a targeted User Adoption Approach.

Microsoft 365

ABOUT GARAIO AG

Since its foundation in 1994, the Swiss company GARAIO has developed into a leading software house. The design and creation of Customer and Employee Experience solutions is our passion. The benefits of working with GARAIO can be seen in the simplification and increased efficiency of demanding business processes, but above all in measurable added value for our customers and their customers.

WHAT WE OFFER:

1 ASSESS

Workshops and interviews are held with sponsors and project management, using targeted assessments to determine the organization's readiness for the upcoming change.

With the identification of clear goals, a common vision is developed that is clear and understandable for all those impacted by the change.

Together, we identify the different affected groups and the impact of change expected for them.

Possible risk factors influenced by the change are considered so that a risk assessment can be prepared.

2 ANALYZE

Based on the assessed risk factors, an initial overview of the impacts for the different groups of stakeholders and a general risk assessment with regard to the human side of change will be provided.

This also enables an estimation of the need for change management, as well as providing recommendations for user adoption and further project-supporting activities.

Expectables:

Clear project objectives

Common Vision

Overview of the impacts of the change

Risk Evaluation

Advice for User Adoption

Advice for CM actions

YOU BENEFIT FROM:

Expert guided program from A to Z

Best-Practices based method

Custom tailored approach with maximum effect

Fixed price offering with defined deliverables

This may be considered as a first step to take before starting teams and/or Microsoft 365 rollout
