

Cutting-Edge Cybersecurity & Compliance for Your Cloud

DATA SHEET

GAUNTLET

Gauntlet is an award-winning SaaS that allows you to monitor and secure your cloud. Taking a security-first approach, Gauntlet consolidates the four primary pillars of cloud security into one powerful platform. Focus on delivering your products. We will take care of security for you.

Clear & Present Danger: Cloud Vulnerabilities

Deep Armor's security experts have worked on hundreds of cloud-hosted applications over the past decade. Over the years, we have seen more exploitable conditions in our customers' cloud infrastructure, than in their applications themselves. These include:

- Excessive read/write access to storage volumes
- Network ACLs and Security Groups allowing public access to restricted services
- Malicious AI models affecting enterprise use cases

Businesses have approached us for solutions after suffering from data breaches, exposure of Intellectual Property, and loss of critical services.

You need a security solution that understands the latest threats, alerts you quickly and helps you remediate the vulnerabilities effectively. Gauntlet offers these capabilities — all within one platform.

Gauntlet: Key Benefits

- ◆ Stop cloud security breaches
- ◆ AI security risk management
- ◆ Support for 14+ compliances
- ◆ 360° security coverage
- ◆ Advanced analytics
- ◆ Agent-less & fully automated
- ◆ Privacy-first: Zero Access to data

4 PILLARS OF GAUNTLET

Cloud Security Posture Management (CSPM)

Scan for 600+ cyber threats against your cloud services. Demonstrate compliance with up to 14 international security standards

Software Supply Chain Security

Secure your 3rd party & open source software: Track, manage & remediate public vulnerabilities (CVE) in your software bill of materials (SBOM)

Secrets Scanning

Monitor your entire cloud environment and source code for exposed keys, secrets, passwords and other sensitive/confidential information

AI Security Posture Management (AISPM)

Visualize and manage cybersecurity risks against your AI services, data and models via our powerful AI Security Control Center.

“The entire feature set itself has significant impact on our security posture, but specifically, the continuous reporting is extremely valuable for us to track new issues”

Brian Wang, Director of Cloud

Why choose Gauntlet?

Trusted by Fortune 100: Our customers include global firms such as Cisco & Intel, government organizations & numerous SMEs

Black Hat Team: Gauntlet architects were invited twice to deliver training at Black Hat USA, and to speak at other Black Hat events. We work with exploits and vulnerabilities every single day.

Latest Threat Intel: Gauntlet is continuously updated with cutting-edge cloud security controls, CVEs and keys/tokens/secrets that may have been inadvertently leaked. We alert you within minutes of detecting any critical vulnerability/exposure.

Key Security Capabilities

Security First — 360° Coverage

Gauntlet implements thousands of security and AI controls, covering all major international security standards, plus learnings distilled from advanced penetration testing engagements over the past decade. Gauntlet runs with least privileges, without an agent & with zero access to your data.

Multi-Cloud, Multi-Account - One Dashboard

Scan all your AWS management/member accounts, Azure tenants/subscriptions with one powerful solution. Gauntlet consolidates your CSPM, SBOM & Secret Scanning security reports into one, intuitive, easy-to-navigate dashboard.

Comply with Regulatory & Security Standards

Demonstrate security due-diligence to your auditors, customers, investors & partners. Gauntlet provides dedicated dashboards for dozens of internationally recognized standards, including CIS, PCIDSS, SOC2, GDPR, NIST, ISO 27001, FDA, and others.
