

AI-Powered Virtual Health Assistant

Simplifying Healthcare Interactions

Gen AI-Powered Virtual Health Assistant: Transforming Healthcare

Our Solution

Transform Healthcare operations with Gen AI-powered virtual assistant that autonomously manages tasks and provides real-time responses

Core Features (Powered by Microsoft Copilot)

Agentic AI

Live AI Copilot

RAG powered Search Engine

Market Relevance*

~\$3B

Annual Cost Savings

~30%

Boost Operational Efficiency

~2.5B

Save Customer Service Hours

Industry Challenges

Fragmented Information
Across Systems

Frequent Query overload

Longer Patient wait times

Benefits

Improved Patient Engagement

Healthcare Staff Productivity

Operational Cost Savings

Reduced Wait Times

Data Collection and Accuracy

Core Features

Agentic AI

Empower seamless patient interaction and automate routine tasks, reducing wait times and enhancing satisfaction

Live AI Copilot

With Live chat Interaction provides suggestions, decision support, administrative support and access to patient history etc during consultations

RAG powered Search engine

Instant access to information from medical records, websites, and knowledge bases for precise query resolution across all healthcare stakeholders

User Personas and Key Functionalities

Patients

Admin /
Contact Center

Doctors

Appointment Scheduling

- Recognizes user intent to book an appointment.
- Collects necessary details -specialization and preferred date/time -to be used by hospital for booking.

Health and Wellness Queries

- Answers general health queries, including symptoms, treatments, and medication information.
- Fetches relevant information from trusted public health sources.

Admin-Related Queries

- Utilizes a knowledge base built from the hospital's FAQ to provide answers.
- Retrieves real-time information from the hospital's website for accurate, personalized responses

Internal Support and FAQs

- Provides instant access to hospital policies, SOPs, and HR support.
- Assists in handling staff queries and incident reporting.

Workflow automation

- Automates staff scheduling, patient record management, and resource allocation.

Insurance related queries

- Provides answers about insurance policies, coverage, and claims.
- Retrieves patient insurance details from the database or documents.

Patient History Access

- Fetches patient medical history and lab reports for informed diagnosis.
- Offers AI-powered suggestions for treatment plans

Admin-Related Queries

- Utilizes a knowledge base built from the hospital's FAQ to provide answers.
- Retrieves real-time information from the hospital's website for accurate, personalized responses

Stakeholders and Use Cases

Patients / Members

● AI-Powered Patient Helper

● Health and Wellness Advisor

● Insurance support Assistant

● Appointment Scheduling

● Medication Adherence

Doctors

● AI-Powered Doctor Helper

● Patient History Access

Patient Contact Center

● AI-Powered Admin Helper

● Intelligent Insurance Assistant

● Workflow automation for appointment scheduling

Future release

Representative Patient journey with our AI Health Assistant

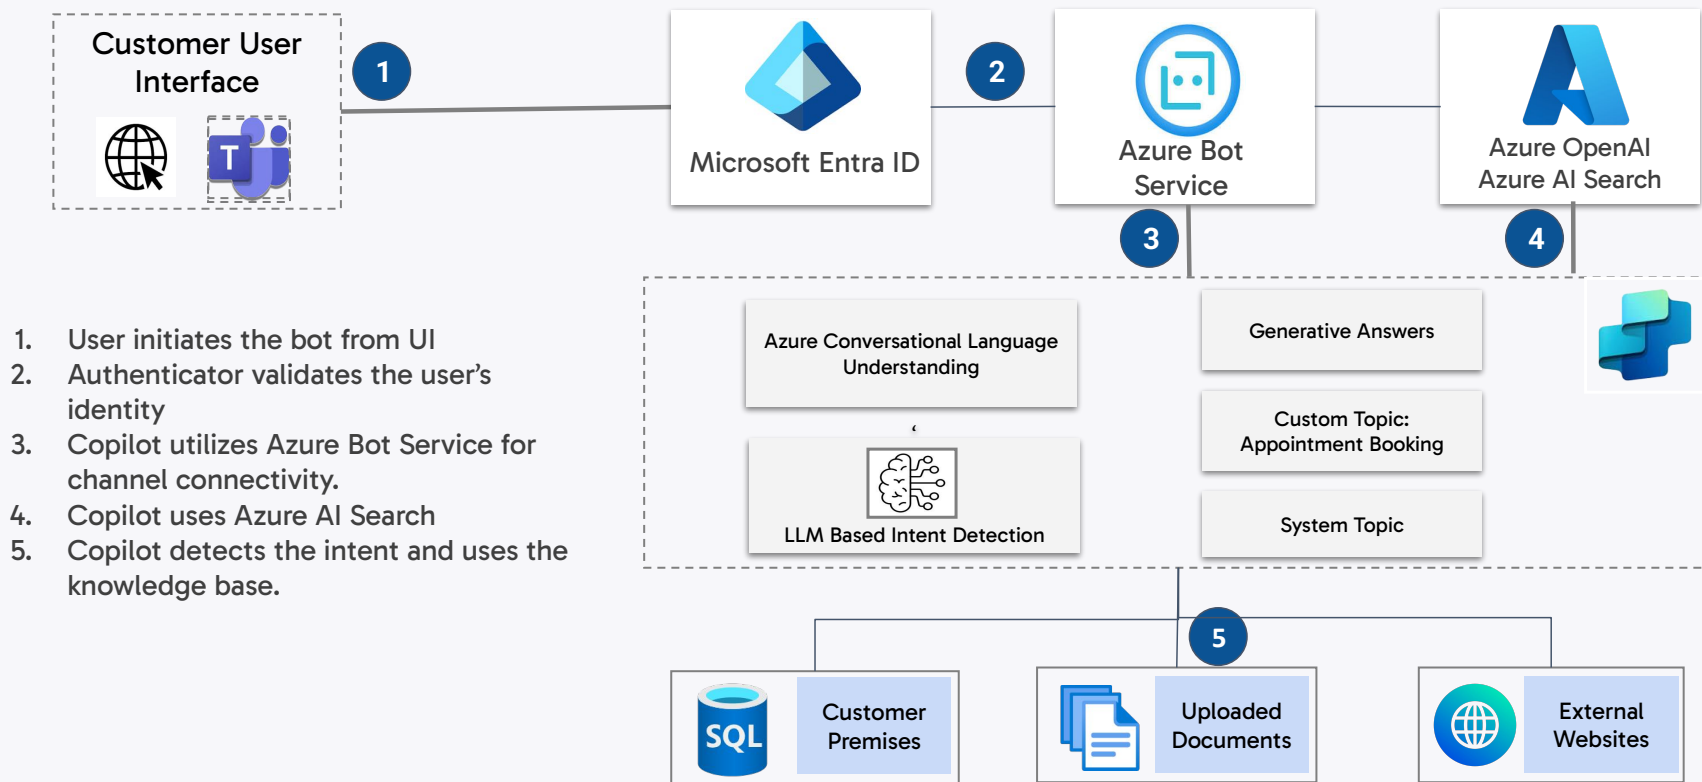

Conceptual Architecture

 Future Release

Reference Architecture

Our Differentiators

Omnichannel Support

Engage with patients through voice, SMS, and chat for seamless communication

Customizable Solutions

Tailored templates and workflows for patient care, billing, and admin

Seamless Integration

Can be integrated EHRs, contact centers, and other healthcare knowledge bases for better care coordination.

Fine-tuned LLMs

Optimized for healthcare-specific interactions like patient triage, claims processing, and clinical decision support.

Faster Response Time

Real-time support for critical patient inquiries and administrative tasks.

Multi-model Capabilities

Supports text, voice, and multi-channel communication for enhanced customer engagement.

Bot Interruption Handling

Smooth transition between AI agents and human support for a better patient experience.

Rapid Deployment

Quick implementation for faster ROI and improved patient outcomes.

No-code Platform

Enables healthcare organizations to automate workflows without technical expertise.

What makes us right fit for healthcare

**Personalized , Empathetic
Interactions**

Automation of Routine Tasks

24/7 Availability and Accessibility

Accurate Health Guidance

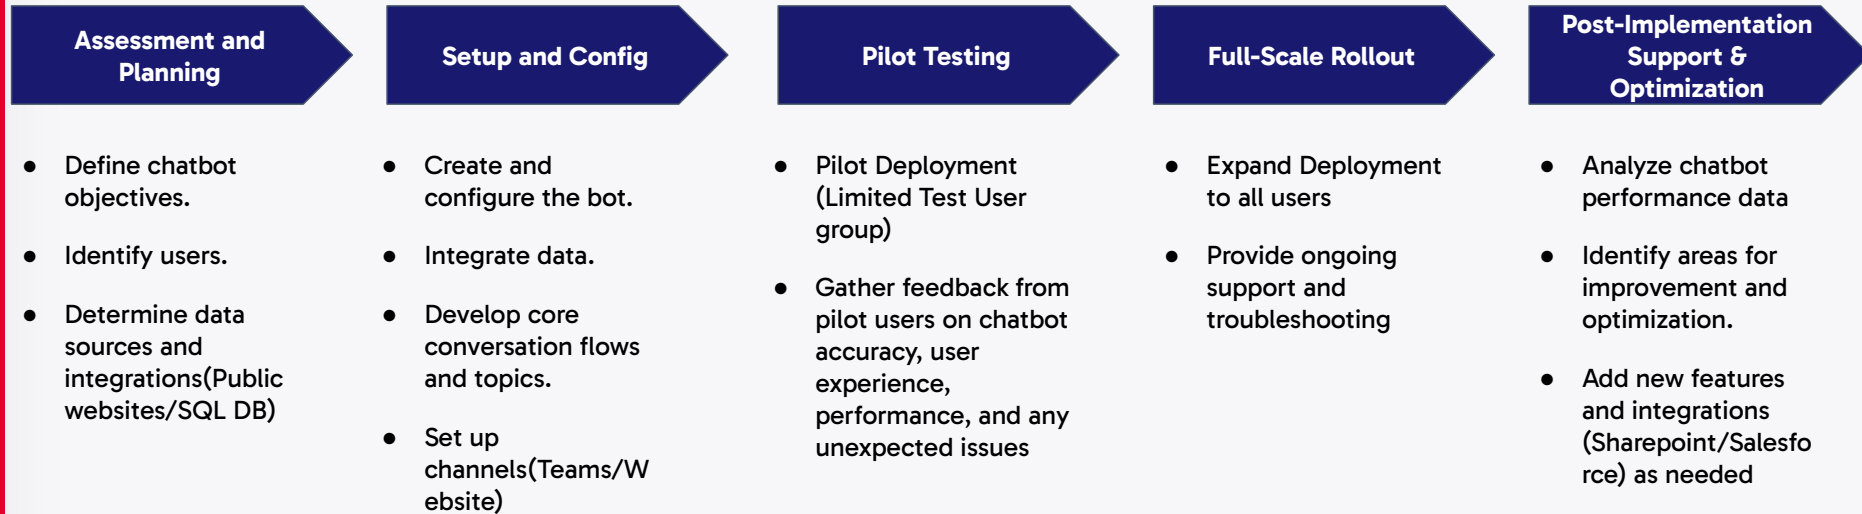

Scalable for High Patient Traffic

Proactive Health Management

Integration / Implementation Process
