

IdentityDesk

Automated user lifecycle management solution for your IT Department

Managing user identities across apps is complex—IdentityDesk simplifies it. Automate the entire user lifecycle from onboarding to offboarding, cut manual tasks, and reduce IT overhead. Compatible with cloud, on-prem, or hybrid setups, IdentityDesk bridges modern IAM and legacy systems effortlessly.

Provisioning

User Addition to HR Systems – Trigger user provisioning workflow upon new hire notification from HR.

Directory Updates – Sync user identity details with directory services like Active Directory.

Provisioning Apps – Automatically assign and configure access to required enterprise applications.

Change Management

New Role Assigned – Update user access based on role or department changes.

Directory Updates – Reflect role changes and corresponding access rights in directory systems.

App Access Update – Adjust permissions across integrated apps as per new user role.

User Terminated from System – Receive termination notice and initiate access removal procedures.

Deprovisioning

Directory Updates – Remove user details from directory and internal systems.

Access Removed – Ensure complete revocation of access to all systems and applications.
