AZURE HEALTH CHECK

Optimising Azure-Based Applications

WHAT IS IT?

Running Azure-Based Applications is one thing, but if you're not getting the best out of them, your business could be at risk of falling behind.

Nasstar's Azure Health Check Review engagement follows a structured review process that uses our unique IP and tooling to determine the currency and compliance of your existing Azure Landing Zone and the workloads contained within it.
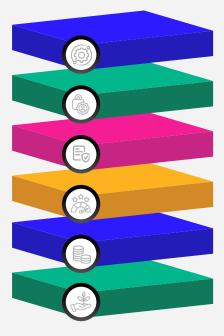

HOW DOES IT WORK?

This review helps organisations understand how best to optimise applications and supporting Azure infrastructure, improves visibility over existing security posture, highlights deviation from best practice and focuses internal resources on remediation based on a rated analysis.

Based on information collected from several workshops and a deep dive into your existing Azure subscriptions, you will receive a report tailored to your business needs providing findings against all key pillars of Azure best practice.

Each pillar will include a Nasstar advisory rating and a summary of recommendations and next steps.

Nasstar's experienced Azure Architects will conduct your review against the following pillars of Azure best practice:

Operations and DevOps
Operational processes for efficiently deploying, managing, and monitoring your Azure solutions.

Security
The continuous security of your applications, data and supporting Azure resources.

Reliability
Withstanding and recovering from system failures in such a way that avoids downtime or data loss.

Performance
Maintaining an optimal level of performance whilst responding to changes in demand.

Cost Optimisation
Optimise to avoid or eliminate unnecessary costs or suboptimal resources.

Sustainability
Continuing to develop new ways of reducing your carbon footprint and becoming more energy efficient.

THE NASSTAR WAY

At Nasstar, we have over 20 years of experience in the design, delivery, and operation of

global technology projects and solutions. Whether you're new to Azure and want to ensure your applications are working at their best level or your established environment is in serious need of TLC, let us help.

Using our Health Check process, we can help you verify current architectures and practices, identify and mitigate risks, and optimise costs and resource utilisation to improve efficiency.
