

AZURE HEALTH CHECK

Your business is always evolving, which means your technology should too.

This is where a Nasstar Azure Health Check can help. By assessing your cloud environment, you will gain a 360-degree insight into your cloud environment, identifying areas for improvement and of opportunity, saving you time and money in the long-term.

Through a series of tailored, interactive customer workshops, we'll work with you to ensure you're getting the most from your cloud environment and setting your business up for future success.

➤ **Session 1**
Landing Zone & Cloud Architecture

➤ **Session 2**
Workloads, Security and Operations Deep Dive

➤ **Session 3**
DevOps & Automation

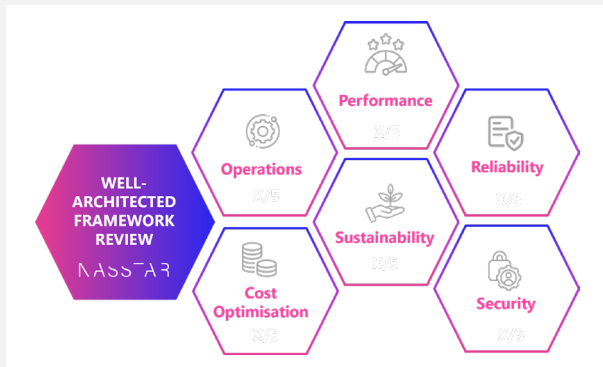

THE FIVE PILLARS OF ARCHITECTURAL EXCELLENCE

Our experts will leverage the Microsoft Azure Well-Architected Framework, a guiding set of principles that help produce high quality, stable and efficient cloud architecture.

This Well-Architected Framework assessment provides confidence that existing services are following a best practice methodology or highlight areas for review, enabling your business to focus on key factors like continuous improvement and modernisation initiatives.

Each pillar will be assessed and benchmarked 1-5 with a Nasstar advisory score, which is based on the discovery of best practice alignment, Azure advisory recommendations, component choices and architectural design decisions.

At the end of the health Check, you'll receive a customised Nasstar advisory score with a detailed breakdown of recommendations across all pillars of Azure Best Practice, improve your visibility, focus your internal resources and drive a sustainable cloud design.

WHY NASSTAR?

Nasstar is a leading Microsoft partner, with over 25 years supporting thousands of customers through the power of Azure cloud.

55 Microsoft professionals with 174 certifications

7 Advanced specialisations
