Microsoft 365 Managed Services by Nasstar

Nasstar's Microsoft 365 Managed Services is a proactive, next-generation support service designed to secure and optimise your Microsoft 365 solutions. By addressing common challenges such as user management, security vulnerabilities, and lack of expert guidance on the optimal configuration, Nasstar ensures your business can fully leverage the power of Microsoft 365.

Clients can expect enhanced productivity, robust security, and seamless integration of Microsoft 365 tools.

APPROACH:

- **Pro-active Services:** Continuous oversight to prevent issues before they impact your business.
- **Expert Guidance:** Access to experts and Microsoft 365 best practices.
- **Customised Management Solutions:** Modular support plans to meet your unique business requirements.
- **Scalable Support:** Flexible services that grow with your business.

BUSINESS OUTCOMES:

- **Increased Productivity:** Streamlined workflows and optimised Microsoft 365 tools for your employees.
- **Comprehensive Security:** Robust controls, governance and enhanced protection against the latest cyber threats.
- **Cost Efficiency:** Reduce operational costs associated with management and support.
- **Improved User Experiences:** Seamless integrations and user-friendly options.

BOOST BUSINESS EFFICIENCY WITH NASSTAR'S NEXT-GEN MICROSOFT 365 MANAGED SERVICES

Productivity with Microsoft 365 & Teams

Nasstar will manage and optimise your Microsoft 365 and Teams environments, enhancing team communication and collaboration. Including proactive monitoring, tuning, and user support to maximise productivity and engagement.

Authentication with Microsoft Azure AD

Our service will oversee the management of Microsoft Azure Active Directory, providing secure identity and access management. This includes user provisioning, role-based access control, and continuous security assessments to safeguard your digital assets.

Device Management with Microsoft Intune

Our team handles the configuration and management of Microsoft Intune, ensuring devices are secure and compliant. This includes mobile device management, application deployment, and policy enforcement to maintain a secure and efficient IT environment.
