

# Azure Jump Start Workshop

The quick and easy way to the cloud in 5 days

During the initial deployment of Azure, the Office 365 tenant and the connection to the company's internal network, **many mistakes** can be made that are **difficult to correct afterwards**.

To help you avoiding these mistakes, GDS Business Intelligence GmbH will support you in building a **best practices landing zone environment** for all further Azure deployments. We will provide you with best practices scripts to build a state of the art cloud architecture.

Besides helping you to take the first steps we also will teach you two full days on **Azure fundamentals**, so you get a hold of the **big picture** and will be able to know which important Azure services can be used in which scenario. Bringing Data to the cloud one of the biggest concerns is **data privacy**. We will show you what you can do to prevent possible data breaches. Another big topic are **costs for cloud resources**. We will help you how to **decrease** your monthly **Azure spending**.

In the remaining two days we will support you in building an architecture for your cloud environment and discuss different approaches how to build your IT Cloud strategy.

## Agenda:

- Day 1: Initial Setup of the Azure Environment Landing Zone
- Days 2 + 3: Azure-course
- Days 4 + 5: Mentoringprogram

If you have any **questions** don't hesitate to **contact us** for clarification
