

Disruptions don't have to cost the world

Network Operations Management from GE Aviation's Digital Group is designed to help commercial airlines manage and mitigate disruptions. By providing a single source of truth gleaned from real-time data across multiple systems, it enables you to see the cascading effect of disruptions on your passengers, crew, and operation. And that means you can make the best choices while improving response and recovery time.

A better way to solve the challenges that come from delays and cancellations

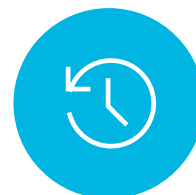

Network Operations management provides real-time views into operations from a single pane of glass. It quickly detects disruptions and the impact on your operation. Then it offers unique "what if" scenario simulations, allowing you to see the full impact of a delay, downgrade, diversion, or cancellation—before it even happens.

Improve performance
by seeing the whole
picture

Simulate solutions to
protect revenue and
boost satisfaction

Minimize your
recovery time today
and in the future

18% fewer cancelled flights

29% less in crew costs

12% fewer delayed flights

30% less revenue loss
from cancellations

(These figures are conservative estimates of potential savings, based on internal GE studies.)
