Anticipate change and empower faster decision-making with an integrated data platform

Build on a trusted platform
Protect and govern your data with the security and privacy controls required in today's digital world

Built on Microsoft's comprehensive approach

Data-driven continuous improvement drives more fulfilling work for employees, increases retention, and positively impacts bottom line results.

Preparing for Microsoft 365 Copilot

Microsoft 365 Copilot combines the power of large language models (LLMs) with your organisation's data – all in the flow of work – to turn your words into one of the most powerful productivity tools

To use Copilot, your organisation must meet some technical requirements and have some features enabled. Copilot users must have either a Microsoft 365 E3 or E5 licence and an Azure Active Directory account, which gives access to the Microsoft 365 apps and services that work with Copilot.

Once available within your organisation, your users will need to be on the Current Channel for Microsoft 365 apps to have access to Copilot in desktop clients.

Microsoft 365 Copilot uses your existing permissions and policies to deliver the most relevant information, building on top of our existing commitments to data security and data privacy in the enterprise.

This means it is important to have good content management practices in the first place. For many organisations, content oversharing, and data governance can be a challenge.

Generation-e, helping customers redefine the way they work with AI, using a powerful copilot in Microsoft 365

Copilot Preparation Workshop

Preparation for Copilot Workshop – 4 hours
Identify your readiness for Microsoft 365 Copilot
