

Cloud-based video monitoring

Complement your services offering and grow your revenues by providing security and peace of mind to your subscribers with cloud-based video monitoring.

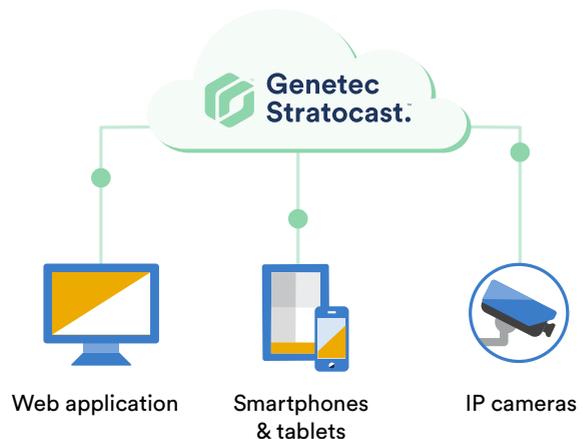

Increase your average monthly revenue

Increase the value of your accounts with a cloud-based video surveillance service that is ideal for customers that want to enhance the security of their business and keep an eye on their operations from wherever they are, 24/7.

Stratocast™ provides service operators a video surveillance-as-a-service (VSaaS) platform that is easy to install and easy to maintain.

What is VSaaS?

By eliminating the need to install and maintain on-site servers, VSaaS uses the internet to connect surveillance cameras to the cloud. This facilitates remote monitoring of a business and also ensures that recordings are securely stored off site.

Why Stratocast?

Increase Average Revenue per User

Grow your monthly services revenue with a simple solution that only requires security cameras and an internet connection. Since there's no advanced certification or training required, clients can be up and running in no time.

Minimize Post-Sale Maintenance

As a fully hosted solution, the latest features and updates are automatically pushed to all clients, without the need for technical assistance. This allows clients to focus on their business, rather than focusing on software installations and system issues.

Simplify Client Management

Easily create accounts, provision cameras and manage your clients. Plan and billing details are automatically generated on a monthly basis, allowing operators to track usage and new installations. Stratocast can also integrate to other existing applications through an API.

Support the Latest HD Cameras

While many surveillance systems still use analog equipment, Stratocast offers access to leading brands of HD network cameras. Clients can take advantage of higher resolutions and enhanced low-light performance and can monitor their business in greater detail.

Who uses Stratocast?

Stratocast has been deployed at a variety of clients including retailers, offices, construction sites and citywide surveillance programs. Stratocast is equally a great fit for standalone and distributed sites, as well as clients with a cloud-first strategy.

Grow your subscribers

The backbone of Stratocast is built on a hyper-scale cloud infrastructure, ensuring you can easily add new accounts and sites, without manual provisioning or on-site hardware.

Service availability guarantee

Backed by a 99.5% SLA, Stratocast ensures subscribers can access and monitor their system, when they need it.

Manage customers from your existing system

With available APIs, providers can integrate Stratocast to their existing cloud marketplace and customer management portals.

Keep video safe

All data transferred between cameras and the cloud is encrypted. Recorded video is also safe from physical damage, as it is stored in the cloud.

Easily connect to cameras

Communication between cameras and Stratocast can be established over standard internet connections, using dynamic IP addresses.

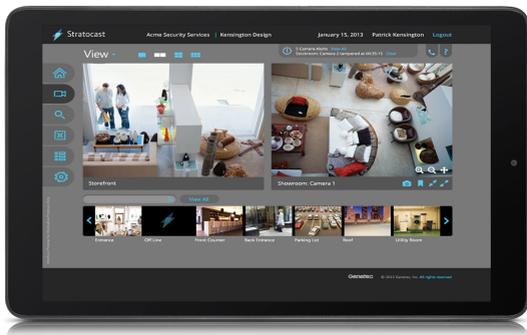

Access from anywhere

With their system connected, subscribers can access their business at any time, from anywhere from the Stratocast web and mobile app.

Security at Your Fingertips.

Stratocast provides clients access to live and recorded video that is easily accessible from their laptop, tablet or smartphone. As video is stored in the cloud, recordings are safe from hardware defect and physical damage and can easily be accessed from anywhere. Users can monitor multiple cameras, zoom-in on points of interest, and playback recorded video to review incidents and key events.

Web Application

An intuitive web client allows users to easily connect to their system and monitor their business. Subscribers can improve security and gain peace of mind, knowing that their business is safe, and operations are running smoothly, wherever they go.

Mobile Apps

Stratocast mobile apps allow users to quickly access their system from anywhere on their Android, Apple and Windows phones and tablets.
