WE TURN DATA INTO INFORMATION

GeodataHub KRONOS is a unique, extremely flexible and reliable platform that allows seamless data integration from a wide range of sensors. The highest quality and data security standards are maintained for collecting, harmonising, structuring, processing, analysing, visualising, and reporting data.

KRONOS mainly focuses on instrumentation & monitoring, surveying, and other fields of geosciences. The information obtained offers extensive opportunities for use during the planning, construction, and operation of infrastructure facilities and by observing our built and natural environment.

Smart Data Structure

KRONOS is a powerful monitoring platform for all sensors, processes, products, and machine data from various sources-highly secure, with a granular authorisation system.

Secure Monitoring

Configurable alarming rules provide a high degree of flexibility to ensure that notifications are made on time in the event of limit violations or malfunctions. By enabling quick responses, potential downtime is minimised.

Perfect Overview

With customised widgets, dashboards, and reports you get an optimal overview that saves you valuable time. KRONOS is designed to support office and mobile users in miniature and extensive projects.
