# RPA piloting business scenario in 2 weeks: Solve your real business case by creating Power Automate workflow with RPA

## ABOUT GGROUUPP:

We are team of enthusiasts focused on helping companies to transform via rapidly creation of business applications on Microsoft low-code technologies – Power Platform

### See what customers are saying:

*"We've been familiar with Power Platform technology by using Power BI for many years. After SAP and 1C implementation we faced difficulties with lots of manual repeatable tasks our employees need to perform working with these systems. We found solution in Power Automate which helped us to save time of 800 employees who works with 50.000 SKUs on daily basis ..."*

– Yuri, IT Manager  
One of the largest Pharmaceutical company in Russia

## WHAT WE OFFER

As a result of these 2 weeks, we will analyze existing infrastructure and choose business process which can be automated to reduce manual tasks. We will design and configure Power Automate workflow with Attended/Unattended RPA together with you.

If you already have Office 365 / Teams / Dynamics 365 / Power BI , we'll show you the ways of extending existing functionality with Power Automate on real example.

You can apply all knowledge to extend existing workflow in future and generate new Power Automate ideas across organization.

As a result of 2 weeks, you will get automated business process via RPA and list of identified manual business process which can be automated by Power Automate.

# Why Power Platform?

The only set of low-code tools your teams need to stay agile and build solutions that move your business forward. Microsoft Power Platform is built from the ground up to work together with strong security, management, and compliance – plus room to grow.

## Connected tools

No other low-code platform offers the ability to work so easily together—and with Microsoft cloud services, hundreds of business applications, and other data sources using a library of connectors.

## Security and compliance

All Microsoft Power Platform tools are built on Azure, so each inherits the same enterprise-grade security, certifications, and administrative controls trusted by businesses around the world.

## Limitless possibilities

With built-in connectivity to services like GitHub and AI Builder, professional developers are able to easily switch between tools while building applications that span a full range of complex requirements as your needs grow.
