

DATACENTER CONSOLIDATION AND MIGRATION

Onsite consulting services to modernise your Datacenter and Migrate Workloads to Microsoft Azure

Discover, assess and migrate server machine workloads to Microsoft Azure or Private Cloud

Benefit

- Standardize Technology
- Reduce CapEX and OpEx
- Prepare for the Cloud
- Migration to the Cloud
- Reduce Sprawl

Information technology (IT) leaders continue to face business imperatives to reduce costs while providing greater value to their organizations. The constantly increasing demand on the data center has caused some organizations to struggle to keep up with the management complexities and cost of physical and virtual server sprawl. The shift to highly virtualized computing has created cost savings from increased hardware utilization but has often resulted in increased operations costs from inefficient processes and standardization.

Advancements in technology and cloud computing paradigms provide a new way for IT organizations to increase the efficiency and effectiveness of data center resources while reducing operational costs. Enhancing infrastructure and consolidating IT helps to reduce data center footprint, helps control physical and virtual machine sprawl, lowers power and cooling costs and promotes a more proactive IT strategy. Consolidation and Migration is a Services Offer designed to help accelerate an IT organization's return on investment from consolidating and enhancing their IT infrastructure.

The Consolidation and Migration Services Offer, part of the Enterprise Services Solution portfolio from Global Computing and Telecoms, your Microsoft Solution Partner, can provide an organization with a strategic approach to consolidating datacentres, physical servers, and migration of virtual machines to a Private Cloud, a Public Cloud or a Hybrid Cloud. Based on an assessment of business and IT objectives, GCT consultants work with organizations to formulate a strategy and approach towards the consolidation and migration of data center assets in an effective way. This can help accelerate adoption of a centralized data center or infrastructure platform, while helping mitigate risk and reduce costs.

Datacenter Consolidating and Migration of Workloads to Microsoft Azure

Related Services

- Cloud Adoption Framework
- Cloud Assessment Rationalization
- Business Continuity and Disaster Recovery
- Private Cloud Infrastructure and Management
- **Consolidation and Migration**

Consolidation and Migration is designed to help your organization migrate workloads to Windows Server Hyper-V, Service Provider Cloud and/or Microsoft Azure.

What Is Included?

- **Discovery, Assessment and Planning:** GCT will work with you to discover the assets in your environment, then assess and plan for the desired end state.
- **Proof of Concept:** GCT will implement, and demonstrate tools and processes, for workload migrations in your environment.
- **Full Migration:** GCT can assist with the full migration of workloads to Windows Server Hyper-V and/or Microsoft Azure.
- **Knowledge Transfer:** GCT will provide ongoing skills transfer throughout the project.
