GLOBAL MICRO

Managed Workstation and Mobile Device Protection

Secure . Comply . Succeed

A combined hardware and software solution secures your remote workforce and streamlines user-driven device deployment.

Today's business challenges need modern solutions

Workplace expectations and the way we work will continue to evolve. The global pandemic highlighted the importance of digital agility. But the challenges of supporting employees in the field put a strain on resources, and organisations are worried about security threats and managing business risks.

51% of leaders said outdated technology hampers their ability to compete for talent

Managed Workstation and Mobile Device Protection is about how you secure, connect, deploy, support, and empower employees in a new way of work.

The opportunity tied to a digital transformation is vast but complex. Even with IT budgets increasing, there is a need to reduce costs.

Managed Workstation Protection is a convenient and cost-effective way to buy a set of services that secures and de-risks your workforce in four critical areas:

| Asset management	Endpoint security	Software and Application Management	Compliance

The challenges

- The need to abide by departmental and industry-wide data security policies and compliance standards
- Maintaining security for Work-from-Home and mobile workforces
- An overwhelming number of vendors, partners, and technology products, prompting the need for simpler single sourcing
- Availability of hardware to ensure high productivity is maintained
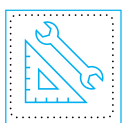

The benefits

- Devices are secured and compliant before being deployed
- Self-service with just a few clicks deploys business applications on devices no matter where they are located
- Hardware can be provided as a service and paid for monthly with full device management and warranty tracking
- All the tools to manage the endpoint and the user's identity are included in the solution

Measurable success

80% reduction in security breach costs
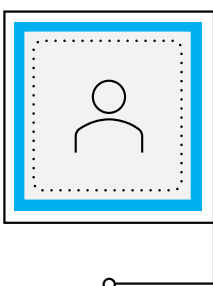

50% reduction in annual security breach volume
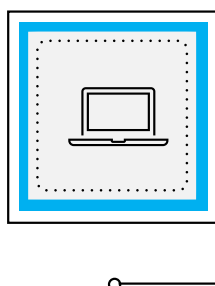

57% reduction in deployment costs

15% reduction in device and application performance tickets
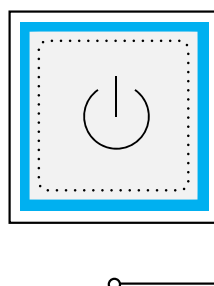

Real-world scenarios
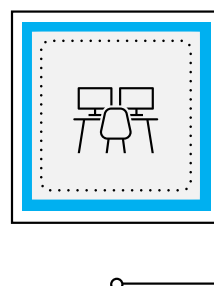

Empowering remote workers

A Cape Town-based organisation just hired a new head of sales, Jennifer, who lives in Johannesburg

Thanks to Workstation Complete Protection, her laptop was sent to her a few days before she started
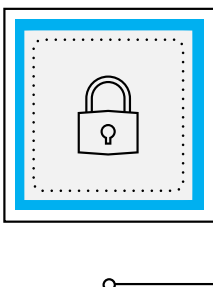

She received it, she powered it on, signed in, and was collaborating with her team in under 45 minutes
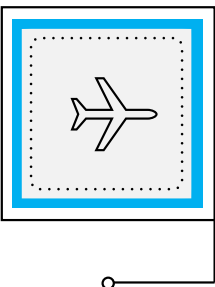

This all happened with minimal IT involvement. And Jennifer never had to set foot in the office
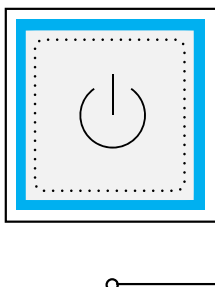

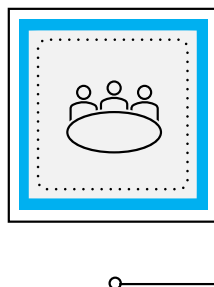

Securing your devices

A CEO's laptop was stolen. Workstation Complete Protection allowed his team to remote lock it instantly

And because of AutoPilot, they were able to send a new laptop to him overnight

When he received it, he powered it on, signed in, and had access to his files in under 45 minutes

This meant no delays, minimal IT involvement, and a CEO who didn't have to cancel his meetings

Workstation Complete Protection with Zero Touch & HaaS revolutionise the way new devices get deployed, reset, and repurposed.

Reduce your IT resource's manual workload and free them up to innovate and create business value.

Understanding your business priorities means understanding your cybersecurity needs.

Get in touch and see how we help you secure, comply and succeed.
