Application Modernization & Migration

We design, build, and evolve world-class digital end-to-end solutions. From human interfaces design to scalable platforms, our full-stack capabilities unleash better and more personalized experiences for customers.

We design digital foundations that we build out from, creating not just short-term gains, but long-term technological transformations that transcend digital.

As Globant, we have several practices, aligned to our main mission, capture, analyze, maintain and process data in order to augment your business value:

- Digital Consulting & Advisory
- Multi-Experience Composable Solutions
- Ecosystem Evolution
- Quality Engineering

Application Modernization & Migration - Approach

Globant proposes that the modernization is performed gradually, starting with two teams that can work in a few previously identified applications — low-hanging fruit — while obtaining platform knowledge to then start the rationalization of the portfolio.

This will allow the creation of the migration plan, that will expand the operation with the ramp-up of other teams, to modernize additional applications and start with the cyclic evolution of the overall ecosystem. Team and timeline for Phase 2 will be defined during Phase 1.

PHASE 1	PHASE 2

APP MODERNIZATION
Initial Re-engineer + Migration of selected Apps

PORTFOLIO RATIONALIZATION
Strategy definition for every app

APP MODERNIZATION + EVOLUTION
Implementation of Modernization plan for the defined Portfolio of Applications
