# Azure Onboarding and governance

A successful Azure project starts with good, solid onboarding, focusing on governance and business-case scenarios. This will ensure that in all current and future Azure solutions, the company gets a uniform structure, and one that complies with the business' IT policy and other guidelines.

Globeteam's Azure Onboarding is our solution for companies that currently use or plan to use Azure to support their business, strategic and IT needs.

In our experience, many companies, public as well as private, already use or plan to use Azure. One of the reasons for its popularity might be its unrivalled support for business-critical applications, operational optimisations, or strategic measures that support the company's digital transformation. Whether the use of Azure happens as a controlled process or as a proliferation out in various parts of the business, it is important to make the right onboarding choices to unleash the full potential of Azure.

## Thoroughly tested model ensures successful integration and use

Globeteam's Azure Onboarding is a well-tested model that ensures Azure becomes a natural expansion of the company's data centre, and that the integration and use of Azure takes place without any issues. The solution can be supplemented with different predefined deliveries, such as making a business case on moving servers in Azure or removing the dependency on internal servers in connection with access to Office 365.

## What is the value of Globeteam's Azure Onboarding?

By choosing Globeteam's Azure Onboarding the company can achieve:

• A secure platform for digital and innovative measures.
• An Azure platform that focuses on structure, security, and operational optimisation.
• An operation centre that provides the opportunity for better disaster recovery.
• An opportunity to access server and data capacity on demand.

Globeteam has specific experience implementing our Azure Governance model with clients such as The Danish Environmental Portal, The Danish Business Authority, and Milestone. We are ready to help companies get started with Azure without compromising the business' needs for speed and flexibility.

# Globeteam's Azure Onboarding consists of 4 modules

- **Azure Hybrid Setup:** The initial, basic setup to "connect" the existing infrastructure with Azure and as such begin using Azure.

- **Azure Governance:** Globeteam Azure Governance is a well-tested model that helps you and your company establish a process for the governance and administration of Azure.

- **Azure Assessment:** Globeteam Azure Assessment is our tool for developing your business case. We identify your IT potential for Azure and develop estimates on migrations.

- **Azure Supporting Services:** Globeteam Azure supporting services is an additional service that can support your use of Azure. These services might be specific additional deliveries, as well as services that assist/support your IT department, be that in the shorter or longer term.

The model is generic, and therefore all modules can be delivered as separate subprojects. A company that has started with the first Azure services might experience a mismatch between consumption and use, or there might be a need to establish a governance structure before proceeding with the next Azure service.

Azure Onboarding can also be delivered as one collective project. This might be a good option for companies that have purchased Azure use via their Microsoft license agreement, or maybe for companies that know they are going to invest in Azure and want to get started in a structured and secure way.
