

# Work is not a place

With the emergence of new technologies and the entrance of millennials into the job market, it has become increasingly important for companies to provide an IT platform that enables employees to work regardless of time and location.

During COVID-19 we have seen companies that suddenly had to support more than 80% of their entire workforce in working remotely and figure out how to maintain productivity and security.

At Globet team we believe that enabling a more flexible work environment is a competitive key for companies to attract employees in the future. This is why we have developed our "WORK IS NOT A PLACE" framework.

## Key challenges

- How can we support our employees' need for mobility?
- How do we maintain security when employees work remotely?
- How can employees collaborate effectively when they are not in the same location?
- Do we have the right technology and tools to facilitate remote work?
- How do we ensure that everyone is familiar with the new technology and tools?
- How can we adapt our infrastructure and network to support remote work at scale?

## Work is not a place - Globet team's solutions to support a secure remote workforce

All solutions are built on top of standard Microsoft 365 E3/E5, Zscaler and Cisco Network products.

### Network capacity

Connectivity  
Scalability  
VPN capacity

### Core Security

Microsoft 365  
(identity, device, data)  
Virtual Desktop  
Network security

### Productivity

Teams/SharePoint  
Teams Enterprise Voice  
OneDrive  
Office ProPlus  
Virtual Desktop  
PowerPlatform

### Adoption

Awareness  
User adoption  
IT operation  
Digitalization

## Our approach to managing digitization projects

To ensure successful digitization projects we have developed a project model for effective digitization. The model combines a structured and methodical approach with our deep knowledge of MS 365. The main elements are:

### 1. Assessment of the company's strategic context

Globeteam makes sure that the possibilities of M365 are aligned with the company's overall thoughts and plans for business development, as well as the derived goals in budgets and planning. This means the IT strategy is in line with what the company wants and we can ensure there are no unnecessary investments driven by a love of technology.

### 2. A specific plan for the technical and organisational implementation of M365

The strategy is incorporated in a specific plan for the roll out of M365, which is effectively connected with the company's strategy, vision and goal. The plan forms a basis for activities within the other three pillars: the IT department; the operational parts of the business; and the support functions.

### 3. Assessment of the technical platform and infrastructure

In collaboration with the company, Globeteam will look at the infrastructure in which M365 will be operating, as well as both the existing, and future, technical setup. This includes infrastructure, security, equipment, connections, and telephone setup, among other things.

### 4. The technical implementation of M365

Globeteam implements the chosen elements of M365 in collaboration with the company. At the same time, we will equip the IT department to be able to handle new operational tasks related to a cloud-based solution that is constantly developing. A key focus is ensuring a structure of good governance, supporting the way in which the organisation works, cooperates, and communicates.

### 5. The organisational implementation of M365

If M365 is to be successfully and efficiently implemented, the end users need to be taken into account and brought on board. Globeteam works professionally with Change Management as an integrated part of the implementation. We build bridges between IT and business, prepare the management team and help users work with the new tools.

## Key benefits of adopting work is not a place

Maintain and increase productivity in a remote and mobile work environment by:

- Ensuring adequate and secure access to the organization's network and resources from anywhere
- Ensuring systems being accessed remotely are secure and available (no downtime)
- Implementing tools and technologies for keeping communication and collaboration effective
- Keeping the user experience as simple as possible by not over-burdening users with complex setup or configuration
- Educating users on how to actually use new tools and systems in a valuable way
- Adjusting management to respond to the new needs of the employees

## Microsoft Teams places Danish law firm Kromann Reumert in the front seat

“ From the time we started until we could call out of the house, it only took a few weeks. It went extremely fast. Globeteam is great at getting things working quickly. They take something very complicated and make it super simple, and then you can slowly build on it from there. It's a pragmatic approach to things which I like. So there is high praise for both the consultants and the solution we have installed. A clear recommendation from us.”

Jacob Brønnum-Schou, IT manager at Kromann Reumert
