Microsoft 365 Copilot Readiness Assessment

GLOBETEAM

Microsoft 365 Copilot is a significant game changer in terms of boosting workplace productivity. To unlock the full potential of Copilot and ensure that company data and operations remain secure and compliant you need to have the necessary compliance and security measures in place.

With our Microsoft 365 Copilot readiness assessment Globeteam helps you prepare for a successful implementation.

Microsoft 365 Copilot is a new digital assistant that will be available for your most common Microsoft 365 apps such as Excel, Word, Outlook, PowerPoint and Teams. Users will be able to access Copilot directly within the application and receive personalized suggestions, insights and feedback.

Since Copilot can retrieve any data to which a user has the appropriate access rights to, regardless of its location and without the user's knowledge, it means there are some important preparations that your company need to ensure for Copilot to be used in a secure and compatible manner.

Globeteam offers a workshop-based Microsoft 365 Copilot readiness assessment, that delivers:

- A comprehensive overview of your current preparedness for Microsoft 365 Copilot.
- A maturity report that outlines current status and clear prioritized tasks to focus on before implementing Microsoft 365 Copilot in your organization, aiming to maximize value and reduce risks.

Based on their extensive experience with the Microsoft 365 Productivity Suite, Zero trust, information protection, governance, adoption and change management, our consultants are ready to guide you through the process and help you realize the full potential of Microsoft Copilot.

Our approach: Workshop-based & data driven

Data-driven: Our methodology prioritizes real data and current trends to ensure objective and well-informed decision-making.

Customized: We customize our workshops to match the customer's current configuration and situation, addressing their specific requirements, thereby maximizing relevance and effectiveness. This ensures that our analyses and solutions are directly pertinent, and can be effectively implemented within the customer's unique context.

Efficient: Rather than conducting scattered interviews, we concentrate on in-depth analysis within a specified time frame.
