

Base64 encoder & decoder

An online for encoding text or binary data like images to base64 and vice versa

The screenshot shows the 64baser website interface for the Base64 encoder & decoder tool. The page has a dark theme. At the top left is the 64baser logo, and at the top right is a 'Share' button. The main heading is 'Base64 encoder & decoder' with a subtitle 'a tool for encoding text or binary data like images to base64 and vice versa'. To the right, there is a note: 'Need the simple HEX encoding, not Base64? Try out **Hexator**, a HEX encoder / decoder' with a right-pointing arrow icon. Below the heading are four buttons: 'Encode by copy & paste', 'Encode by upload', 'Decode by copy & paste', and 'Decode by upload'. The 'Encode by copy & paste' button is selected. Below these buttons is a section titled 'Encode a text to Base64 by copy & paste' with a sub-note: 'The text will be encoded to UTF8 and then converted to Base64. If you want a different encoding, upload rather a file with your own encoding, or any other binary file'. A large text input area is provided, and an 'Encode' button is at the bottom right of this section. At the bottom of the page, there is a 'Our other tools:' section with a 'More tools' link and icons for various tools: Punycode converter, HTML cleanup tool, HTML fixing tool, HTML encoder, URL encoder, Guid generator, Hex encoder, C/C++ string escaper, and C# string escaper. At the very bottom, there are links for 'About', 'Facebook', 'Twitter', 'Terms', and 'Privacy'.
