

Summary

GOBI Technologies modernizes end-user computing by delivering secure, cloud-based desktops through Azure Virtual Desktop. This engagement replaces traditional desktop models with a scalable, centrally managed solution that supports hybrid work, security, and efficiency.

We assess the current desktop environment, user roles, applications, and compliance needs to design an AVD architecture aligned to business and security requirements.

GOBI then delivers a production-ready AVD environment with optimized images, security controls, documentation, and IT handoff—enabling confident, governed operations at scale.

Deliverables

- **Executive Workforce Modernization Brief:** Leadership-level summary highlighting business outcomes, security posture, cost considerations, and key decisions related to the Azure Virtual Desktop deployment.
- **Business & Technical Readiness Assessment:** Evaluation of desktop environment readiness, user segmentation, application suitability, and compliance requirements impacting cost, risk, and deployment timelines.
- **Production Azure Virtual Desktop Solution:** Fully deployed, enterprise-ready AVD environment designed for scalability, security, and operational efficiency.
- **Security, Governance & Cost Controls:** Implemented access controls, monitoring, scaling policies, and cost-optimization mechanisms to manage spend and reduce operational risk.
- **Operational Transition & Value Realization Package:** Runbooks, documentation, knowledge transfer, and financial guidance to support sustainable operations and long-term value realization.

Assessment Focus:

- End-User Computing Readiness
- AVD Architecture & Security
- Operation, Scale & Cost Efficiency

Benefits

Modern Workforce Enablement: Empower employees with secure, flexible access to desktops and applications from any device, supporting hybrid and remote work.

Enterprise-Grade Security by Design: Protect data and access with centralized security controls, identity integration, and compliance-aligned configurations.

Operational Efficiency at Scale: Reduce desktop management complexity through centralized administration, standardized images, and automated scaling.

Improved User Productivity: Deliver consistent performance and user experience with optimized images, profiles, and Microsoft 365 integration.
Cost Optimization and Control: Leverage Azure's consumption model and scaling capabilities to optimize costs while aligning spend with actual usage.

Production-Ready from Day One: Transition to a fully operational AVD environment with documented processes, runbooks, and a clear path for ongoing operations.

Why partner with GOBI for your Microsoft cloud needs

GOBI Technologies is a trusted Microsoft Cloud Partner helping organizations turn technology into measurable business results.

 Infrastructure Azure Specialist Infra and Database Migration	 Data & AI Azure Specialist Analytics	 Digital & App Innovation Azure
---	--	--

Proven Track Record - Successfully guided 200+ organizations through cloud transformation with documented ROI exceeding 304% within 3 years.

Risk Mitigation Excellence - Comprehensive risk assessment and mitigation strategies that protect your business during transformation while accelerating value realization.

End-to-End Partnership - From initial strategy through full implementation and ongoing optimization, we remain your trusted advisor throughout the entire journey.

Microsoft Direct Access - Our Solutions Partner status provides direct channels to exclusive resources to help accelerate your cloud adoption.
