cloudforce

nebulaONE®

The secure and affordable way to transform your work with Generative AI

At Cloudforce, we like skipping past the conventional and moving straight to the extraordinary. We designed nebulaONE® to be a complete AI toolbox that empowers organizations like yours to easily create custom branded, fully owned, highly secure, and extraordinary useful AI-powered assistants that you can use for virtually any purpose, all contained within your own secure cloud environment.

Highly Secure & Private

Complete deployment in your private Azure environment offers total data sovereignty and never exposes your protected data to the public Internet. Robust tools to facilitate management oversight, role-based access, and our NIST-compliant architecture allow the platform to be tailored to meet virtually any compliance requirements.

Brand your AI to match the look and feel of your brand, while maintaining a familiar and intuitive chat interface to expedite user adoption.
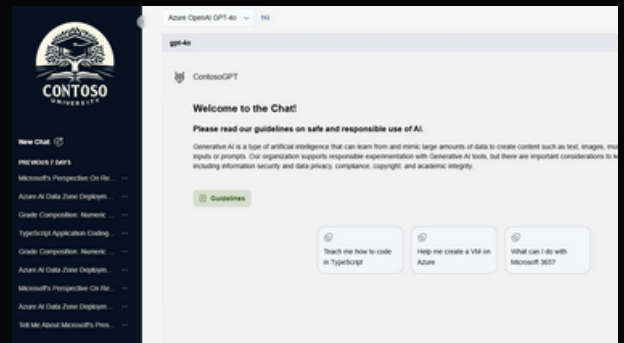

Extraordinarily Useful

nebulaONE® does more than any public AI tool. Rapidly create no-code, custom branded AI assistants capable of performing virtually any task on any data set, no matter how sensitive or proprietary. Start seeing value from Day 1 with professional training, change management, and user adoption support via our dedicated Cloud Advocacy team.

Most Affordable Ownership Model

Say goodbye to endless licensing fees, procurement headaches, and all of the risks that come with building your future on rented land. Own your solution and all the data, and pay only for what you use with NO per-user fees.

Every deployment is robustly supported by our Microsoft-certified SMEs, and automatically updated with the latest models and features.

Transform your organization's potential with nebulaONE® - the secure, affordable AI solution that delivers a major win: putting you in control of tomorrow's technology, today.
