

Any API. Any Event. Any Agent.

Gravitee is how you can finally manage all APIs, event streams and agentic AI as securely and easily as traditional APIs – and bring together all your APIs in one place, no matter the gateway, broker or agent. When nothing's holding back your data, no business idea or revenue stream is out of reach.

BUILD IT WITHOUT LIMITS

Full-Lifecycle Management

- Scale from legacy APIs to event-driven architectures and AI agents with a single solution that grows with your business.

Flexible API and Event Stream Management

- Handle synchronous, asynchronous, and streaming APIs with full support for policies, rate limiting, message filtering, and more, ensuring control over every data flow.

AI Agent Governance

- Manage autonomous agents and LLMs with comprehensive security, monitoring, and compliance features, simplifying complex AI governance.

A2A Support–Standardize Communication for Multi-Agent Systems

- Standardize how autonomous agents communicate and collaborate with each other – even for frameworks that don't natively support A2A, like AWS Bedrock.

BRING IT ALL TOGETHER

Multi-Gateway & Multi-Broker Support

- Bring all your APIs and event streams together, from Gravitee to AWS, Apigee, Kafka, Solace, and beyond, with one centralized management platform.

Granular Access Control

- Securely manage access to your APIs, event streams, and AI agents based on identity, scope, or context.

Developer Portal & Agent Catalog

- Provide a single access point for developers to discover APIs, manage Kafka topics, and explore AI agents, with detailed documentation and self-service capabilities.

MCP-Enable any API or Event from any gateway

- Securely open your API and events for Agent consumption, regardless of their gateway or broker.

BE WHERE THINGS ARE GOING

Flexible Deployment

- Deploy on the cloud, on-premises, or in a hybrid model, supporting your evolving infrastructure needs while keeping control of costs and scaling.

Built for Tomorrow

- Gravitee's performance and scalability ensure your systems can grow as your organization needs—whether you're managing APIs, streaming data, or AI-driven agents.

Cost Optimization

- Reduce infrastructure complexity and cost by consolidating API management, event stream control, and AI agent governance into a single platform, with powerful analytics to help optimize resource allocation.

Open Core & Kubernetes Native

- Gravitee's open-source foundation and seamless integration with Kubernetes position it for future growth and adaptation to modern infrastructure needs.

With Gravitee, you can stop holding back. Empower your teams to fully control and secure APIs, event streams, and AI agents—no compromises. Whether you're scaling your infrastructure, improving governance, or driving innovation, Gravitee gives you the flexibility to do it all.

Don't limit your capabilities—Gravitee lets you bring it all together, securely and efficiently.
