ASR to Azure Recovery

LUNAVI

Affordable, Always-On Protection

ASR to Azure recovery replicates workloads running in your on-premise datacenter to Azure without the added infrastructure costs of standing up a secondary datacenter. ASR provides both business continuity and disaster recovery for your on-premise servers.

Ensure your enterprise computing workloads are always protected at an affordable rate. Our technology helps to maximize and automate your datacenter investments, providing proactive, automated replication of your on-premise workloads to Azure and allowing those workloads to automatically come online in the event of a failover.

Infront Consulting Group: A Green House Data Company

Infront is a global enterprise advisory service provider that helps clients get the most out of their Microsoft investments. We are experts in Microsoft Azure, datacenter automation, System Center, Active Directory, security, mobility, desktop deployment and many other Microsoft technologies. As part of the Lunavi family, we can also provide ongoing managed services around cloud infrastructure, disaster recovery, data center solutions, information security and automation.

ADDITIONAL BENEFITS:

- Ongoing replication
- Secure, protected replication and destination environment
- Guaranteed uptime for apps when they're needed most
- Testing against recovery plans and copies of production workloads
- Eliminate costly secondarydatacenter or colo facilities for failover purposes
- Recovery for Hyper-V and VMware virtual machines as well as physical servers
- Support for Windows or Linux operating systems
